Metallization P. S. Ho, 2004-12-14 Continuing the spirit of the previous workshops the proceedings contain new research results and advances in basic understanding of stress induced phenomena in metallization The current technology drive to implement low dielectric constant materials into copper metallization has brought new and significant challenges in process integration and reliability Stresses arising in metallizations and surrounding dielectric structures due to thermal mismatch electromigration microstructure changes or process integration can lead to damage and failure of interconnect structures Understanding stress related phenomena in new materials and structures becomes critical for reliability improvement and metallization development This is reflected in the papers included in the proceedings which report results on electromigration thermal stresses and void formation in copper low k interconnect structures The book also includes new results on fracture of low k dielectric structures an important research area for reliability and integration of copper metallization *Physics of the Solid State*, 2006 Stress-Induced Phenomena in Metallization Paul S.  have transitioned from a technology niche to a role of major industrial significance The worldwide market for MEMS is now
 approximately 10 billion and the total value of systems enabled by MEMS is several orders of magnitude higher than this
 figure As the market has grown the material and process sets have broadened and departed from their semiconductor roots
 In addition to engineering materials there is now great interest in integrating multifunctional nanomaterials smart materials
 and biomaterials within MEMS NEMS to enhance functionality performance and reliability The opportunities created by this
 integration have generated a vibrant research community working on new materials and processes This book reflects the
 breadth of topics currently under investigation in the field Novel materials and accompanying processes are discussed as are
 more conventional materials and processes Consistent themes are the need for accurate material property assessment at the
 relevant length scales and for suitable metrology tools to support the introduction of new materials *Annual Review of
