Vegetation Dynamics Synthesis Ecophysiology Modelling:

Vegetation Dynamics Derek Eamus, Alfredo Huete, Qiang Yu, 2015-11 Understanding ecosystem structure and function requires familiarity with the techniques knowledge and concepts of the three disciplines of plant physiology remote sensing and modelling This is the first textbook to provide the fundamentals of these three domains in a single volume It then applies cross disciplinary insights to multiple case studies in vegetation and landscape science A key feature of these case studies is an examination of relationships among climate vegetation structure and vegetation function to address fundamental research questions This book is for advanced students and researchers who need to understand and apply knowledge from the disciplines of plant physiology remote sensing and modelling It allows readers to integrate and synthesise knowledge to produce a holistic understanding of the structure function and behaviour of forests woodlands and grasslands Integrating Ecosystem Sampling, Gradient Modeling, Remote Sensing, and Ecosystem Simulation to Create Spatially Explicit Landscape Inventories Robert E. Keane, 2002

The Terrestrial Biosphere and Global Change Brian Walker, 1999-03-25 Summarises understanding of global change interactions with terrestrial ecosystems

Environmental Modelling John Wainwright, Mark Mulligan, 2013-04-01 Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines Central to the concept of this second edition is the idea that environmental systems are complex open systems The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines

Environmental Modelling Finding Simplicity in Complexity 2nd edition is divided into four main sections An overview of methods and approaches to modelling State of the art for modelling environmental processes Tools used and models for management Current and future developments The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling This edition Focuses on simplifying complex environmental systems Reviews current software tools and techniques for modelling Gives practical examples from a wide variety of disciplines e g climatology ecology hydrology geomorphology and engineering Has an associated website containing colour images links to WWW resources and chapter support pages including data sets relating to case studies exercises and model animations This book is suitable for final year undergraduates and postgraduates in environmental modelling environmental science civil engineering and biology who will already be familiar with the subject and are moving on to specialize in the field It is also designed to appeal to professionals interested in the environmental sciences including environmental consultants government employees civil engineers geographers ecologists meteorologists and geochemists
