Underfloor Air Distribution (UFAD) Liangcai Tan, 2008 This project covered the laboratory investigation phase of Task 2 where the performance and cost effectiveness of underfloor air distribution and conventional air distribution systems were compared

Performance and Optimization of an Underfloor Air Distribution System in an Educational Building in a Hot and Humid Climate Vasiliy Khmelenko, 2015 Today there is a proliferation of different HVAC system configurations Design and performance of each HVAC system are dependent on climate and the intended use of the building Energy recovery ventilation is becoming more common in new buildings and is one of the more popular retrofit options in hot and humid climates Currently there is a lack of optimization strategies that involve the underfloor air systems combined with Energy Recovery Ventilation ERV especially in hot and humid climate This thesis examines the performance and optimization of underfloor air distribution systems UFAD in hot and humid climates This thesis also compares the UFAD system performance

to a typical overhead air handler unit AHU system found in Texas The performance comparison is done with EnergyPlus modeling software Separate sets of models are created to examine performance of at different operational parameters The minimum air flow rates are modeled at 0.1 cfm/ft², 0.2 cfm/ft², 0.3 cfm/ft², 0.4 cfm/ft² for both UFAD and overhead OH systems The supply air temperatures were modeled at 55 F, 60 F and 63 F Outside air strategies include simple economizer, energy recovery ventilation (ERV) as well as a combination of both economizer and ERV The study found that at low minimum 0.1 cfm/ft² flow rates an overhead system will slightly outperform a UFAD system OH is 2.6% cheaper to operate than UFAD while at 0.3 cfm/ft² a UFAD system is more efficient UFAD is 14.8% cheaper to operate The outside air strategies have the same energy savings effect on both systems The UFAD system has a higher peak cooling load and a lower peak heating load compared to the overhead system This thesis also covers the stratification and supply air temperature measurements within two offices inside the Mitchell Physics building located on the Texas A M campus The stratification measurements showed that on average the stratification was lower than expected for such systems with office 411 having average stratification of 1.8 F and office 423 average stratification of 1.5 F Temperature measurements at the diffuser level showed some reheat especially during unoccupied periods such as early mornings, late evenings and weekends even when the outside temperature was above the interior thermostat set point System level total supply air flow rate showed little variation with a minimum of 0.47 cfm/ft² and a maximum of 0.59 cfm/ft² The analysis of energy recovery wheel operation concluded that the low exhaust air flow of only 0.2 of the outside air is responsible for the low temperature difference observed in the outside air stream through the ERV The electronic version of this dissertation is accessible from <http://hdl.handle.net/1969.1/155245>

Using ductwork to improve supply plenum temperature distribution in underfloor air distribution (UFAD) system Wilmer Pasut, 2011 [Air Distribution Technology](#) Charles Nehme, 2024-06-08 The role of air distribution systems in modern buildings cannot be overstated As the primary components responsible for delivering conditioned air into residential, commercial and industrial spaces, air diffusers, registers and grilles significantly impact indoor air quality, thermal comfort and energy efficiency This book is dedicated to exploring these crucial elements of HVAC systems, providing a comprehensive guide for engineers, architects and HVAC professionals Scope and Purpose The purpose of this book is to present a detailed analysis and understanding of air diffusers, registers and grilles, covering their design, selection, installation and maintenance By delving into the technical aspects and practical applications, we aim to equip readers with the knowledge necessary to optimize air distribution in various environments Residential Applications In residential settings, air diffusers, registers and grilles play a vital role in creating comfortable living conditions This book examines the unique requirements of residential HVAC systems, including considerations for noise control, aesthetic integration and space constraints Detailed case studies and best practice guidelines provide insights into achieving optimal air distribution in homes Commercial Applications Commercial buildings present distinct challenges due to their diverse usage patterns and occupancy levels This book

addresses the complexities of designing air distribution systems for offices retail spaces educational institutions and healthcare facilities Emphasis is placed on achieving energy efficiency indoor air quality and compliance with building codes and standards Industrial Applications Industrial environments often have demanding requirements for air distribution due to large spaces high ceilings and specific process needs This book explores the design and implementation of air diffusers registers and grilles in manufacturing plants warehouses and other industrial facilities Topics include durability airflow management and integration with specialized ventilation systems Structure of the Book The book is organized into several key sections each focusing on different aspects of air diffusers registers and grilles Fundamentals of Air Distribution An introduction to the principles of air movement and distribution including airflow dynamics pressure drop and diffusion patterns Types and Designs A comprehensive overview of the various types of air diffusers registers and grilles detailing their construction materials and performance characteristics Selection Criteria Guidelines for selecting the appropriate air distribution components based on factors such as room size usage thermal loads and acoustic requirements Installation Practices Best practices for the proper installation of air diffusers registers and grilles to ensure efficient operation and ease of maintenance Performance Testing and Maintenance Methods for testing and maintaining air distribution systems to ensure they operate at peak efficiency and provide a healthy indoor environment Case Studies Real world examples and case studies highlighting successful applications of air diffusers registers and grilles in residential commercial and industrial settings Conclusion Whether you are a seasoned professional or a newcomer to the field of HVAC this book aims to be a valuable resource providing practical knowledge and guidance on air diffusers registers and grilles

Cold Air Distribution
Allan Thomson Kirkpatrick, James S. Elleson, 1996-01-01 This design guide provides designers and building owners with the basic information needed to design install and operate successful cold air distribution systems It provides comprehensive coverage of cold air distribution considerations and can function as an entry point into the literature for those seeking more detailed information on specific aspects of cold air distribution design ASHRAE Research Project 849

Performance of Underfloor Air Distribution in a Fieldsetting, 2005 Underfloor air distribution UFAD is a new method of supplying heated or cooled air throughout a building Reported advantages of UFAD include energy savings and improved indoor air quality IAQ We measured several aspects of the performance of an UFAD system installed in a medium size office building The measured air change effectiveness was very close to unity which is comparable to that measured in buildings with typical overhead air distribution The pollutant removal efficiency for carbon dioxide was 13% higher than expected in a space with well mixed air suggesting a 13% reduction in exposures to occupant generated pollutants The increase in indoor air temperatures with height above the floor was only 1 to 2 C This amount of thermal stratification could reduce the sensible energy requirements for cooling of outdoor air by approximately 10% The occupant s level of satisfaction with thermal conditions was well above average and this high satisfaction rating could possibly be due in all or part to the use of a UFAD

system The results of this study provide some evidence of moderate energy and IAQ related benefits of UFAD Before general conclusions are drawn the benefits need to be confirmed in other studies *Air Distribution in Buildings* Essam E.
