

BASICS OF TOPOLOGICAL SPACES

S R DOTY

In these days the angel of topology and the devil of abstract algebra fight for the soul of every individual discipline of mathematics. —Hermann Weyl

1. METRIC SPACES

Topology is the abstract study of continuity. In many situations, one has a way to measure distance between points, and such a metric always leads to a topology. But one can have topology even in situations where a metric is lacking.

1.1. Definition. A metric space is a set X together with a distance function $d : X \times X \rightarrow \mathbb{R}$. The distance function enables us to measure distance between two points of X , and satisfies the properties:

- (1) $d(x, y) \geq 0$
- (2) $d(x, y) = 0$ if and only if $x = y$
- (3) $d(x, y) = d(y, x)$
- (4) $d(x, z) \leq d(x, y) + d(y, z)$

for every $x, y, z \in X$.

The fourth axiom is known as the *triangle inequality*. Of course, Euclidean space $\mathbb{R}^n$ is a metric space with distance function given by the familiar distance formula:

$$d(x, y) = |x - y| = \sqrt{(x - y) \cdot (x - y)} = \sqrt{\sum_i (x_i - y_i)^2}$$

where $x = (x_1, \dots, x_n)$, $y = (y_1, \dots, y_n)$ are any points in $\mathbb{R}^n$. The proof that this particular distance function satisfies the triangle inequality is an amusing exercise based on the Schwarz inequality: $|\langle v, w \rangle| \leq |v| \cdot |w|$ for any $v, w \in \mathbb{R}^n$. Using it, we calculate:

$$\begin{aligned} |v + w|^2 &= \langle v + w, v + w \rangle \\ &= \langle v, v \rangle + 2\langle v, w \rangle + \langle w, w \rangle \\ &\leq |v|^2 + 2|v| \cdot |w| + |w|^2 = (|v| + |w|)^2 \end{aligned}$$

whence $|v + w| \leq |v| + |w|$. Upon setting $v = x - y$, $w = y - z$ this gives the triangle inequality. The Schwarz inequality itself is easy to

Topological Spaces Topological Spaces:

Topological Spaces Gerard Buskes, Arnoud van Rooij, 2012-12-06 This book is a text not a reference on Point set Topology It addresses itself to the student who is proficient in Calculus and has some experience with mathematical rigor acquired e g via a course in Advanced Calculus or Linear Algebra To most beginners Topology offers a double challenge In addition to the strangeness of concepts and techniques presented by any new subject there is an abrupt rise of the level of abstraction It is a bad idea to teach a student two things at the same moment To mitigate the culture shock we move from the special to the general dividing the book into three parts 1 The Line and the Plane 2 Metric Spaces 3 Topological Spaces In this way the student has ample time to get acquainted with new ideas while still on familiar territory Only after that the transition to a more abstract point of view takes place Elementary Topology preeminently is a subject with an extensive array of technical terms indicating properties of topological spaces In the main body of the text we have purposely restricted our mathematical vocabulary as much as is reasonably possible Such an enterprise is risky Doubtlessly many readers will find us too thrifty To meet them halfway in Chapter 18 we briefly introduce and discuss a number of topological properties but even there we do not touch on paracompactness complete normality and extremal disconnectedness just to mention three terms that are not really esoteric *Topological Spaces* H. J. Kowalsky, 2014-05-12 Topological Spaces focuses on the applications of the theory of topological spaces to the different branches of mathematics The book first offers information on elementary principles topological spaces and compactness and connectedness Discussions focus on locally compact spaces local connectedness fundamental concepts and their reformulations lattice of topologies axioms of separation fundamental concepts of set theory and ordered sets and lattices The manuscript then ponders on mappings and extensions and characterization of topological spaces including completely regular spaces transference of topologies Wallman compactification and embeddings The publication takes a look at metric and uniform spaces and applications of topological groups Topics include the Stone Weierstrass Approximation Theorem extensions and completions of topological groups topological rings and fields extension and completion of uniform spaces uniform continuity and uniform convergence metric spaces and metrization The text is a valuable reference for mathematicians and researchers interested in the study of topological spaces **Introduction to Metric and Topological Spaces** Wilson Alexander Sutherland, 1975 One of the ways in which topology has influenced other branches of mathematics in the past few decades is by putting the study of continuity and convergence into a general setting This book introduces metric and topological spaces by describing some of that influence The aim is to move gradually from familiar real analysis to abstract topological spaces The book is aimed primarily at the second year mathematics student and numerous exercises are included *Topology and Linear Topological Spaces* Hidegorō Nakano, 1951 The purpose of this book is to pick up theoretical points in the book of S Banach Theorie des operations lineaire and to arrange them by modern method **Introduction to Metric and Topological Spaces** Wilson A
