 Pollution** Daniel Vallero, 2007-10-01 Fundamentals of Air Pollution is an important and widely used textbook in the
 environmental science and engineering community Written shortly after the passage of the seminal Clean Air Act
 Amendments of 1990 the third edition was quite timely Surprisingly the text has remained relevant for university professors
 engineers scientists policy makers and students up to recent years However in light of the transition in the last five years
 from predominantly technology based standards maximum achievable control technologies or MACTs to risk based
 regulations and air quality standards the text must be updated significantly The fourth edition will be updated to include
 numerous MACTs which were not foreseen during the writing of the third edition such as secondary lead Pb smelting
 petroleum refining aerospace manufacturing marine vessel loading ship building printing and publishing elastomer
 production offsite waste operations and polyethylene terephthalate polymer and styrene based thermoplastic polymers
 production Focuses on the process of risk assessment management and communication the key to the study of air pollution
 Provides the latest information on the technological breakthroughs in environmental engineering since last edition Updated
 information on computational and diagnostic and operational tools that have emerged in recent years **Introduction to
