Exposure of the American Population to Radioactive Fallout

Tests National Research Council,Division on Earth and Life Studies,Board on Radiation Effects

Research,Committee to Review the CDC-NCI Feasibility Study of the Health Consequences from Nuclear Weapons

Tests,2003-03-25 This report is a review of the draft feasibility study that was issued at the request of Congress by the

Centers for Disease Control and Prevention CDC and the National Cancer Institute NCI Over 500 atmospheric nuclear

weapons tests were conducted at various sites around the world during 1945 1980 As public awareness and concern

mounted over the possible health hazards associated with exposure to the fallout from weapons testing a feasibility study was

initiated by CDC and NCI to assess the extent of the hazard The CDC NCI study claims that the fallout might have led to

approximately 11 000 excess deaths most caused by thyroid cancer linked to exposure to iodine 131 The committee noted

that CDC and NCI used the best available data to estimate exposure and health hazards The committee does not recommend

an expanded study of exposure to radionuclides other than 131I since radiation doses from those radionuclides were much

lower than those from 131I It also recommended that CDC urge Congress to prohibit the destruction of all remaining records

relevant to fallout *Flying Magazine* ,1985-07 **Flying Magazine** ,1972-03 Practice Tests for All Jobs Nathan H.
