Unnatural Selection Unnatural Selection:

Unnatural Selection Emily Monosson, 2016-03-29 Gonorrhea Bed bugs Weeds Salamanders People All are evolving some surprisingly rapidly in response to our chemical age In *Unnatural Selection* Emily Monosson shows how our drugs pesticides and pollution are exerting intense selection pressure on all manner of species And we humans might not like the result Monosson reveals that the very code of life is more fluid than once imagined When our powerful chemicals put the pressure on to evolve or die beneficial traits can sweep rapidly through a population Species with explosive population growth the bugs bacteria and weeds tend to thrive while bigger slower to reproduce creatures like ourselves are more likely to succumb *Unnatural Selection* is eye opening and more than a little disquieting But it also suggests how we might lessen our impact manage pests without creating super bugs protect individuals from disease without inviting epidemics and benefit from technology without threatening the health of our children *BITCHfest* Lisa Miya-Jervis, Andi Zeisler, 2006-08-08 Offers an assortment of the most provocative essays reporting rants and raves from *Bitch* magazine's first ten years along with new pieces written especially for this collection **The Unnatural Selection of Our Species** Torill Kornfeldt, 2024-07-09 In 2018 the first genetically modified children were born Now we have the tools to reshape the future of our species With a pair of genetic scissors known as CRISPR we can select the traits of our children avoid ageing or cure disease With that ability comes new risks forcing us to face hard ethical questions Torill Kornfeldt has travelled the world to meet the people driving this research forward She has visited fertility clinics in South Korea oncologists in China who are experimenting on sick patients and biohackers in the US who want to make the new technology available to everyone In *The Unnatural Selection of Our Species* she asks How can we handle these new tools that could change our genetic material Well written knowledgeable and engaging exactly how really good popular science is supposed to be Gustav K Ilstrand Nobel Centre Torill Kornfeldt is a Swedish science journalist with a background in biology She has worked in the science department of Sweden's leading morning newspaper *Dagens Nyheter* and at the science branch of the Swedish public radio There she created the successful radio show *Tekniksafari* Tech Safari on new technology changing society Her main focus is on how emerging bioengineering and technology will shape our future **Unnatural Selection** Katrina van Grouw, 2018-07-31 A lavishly illustrated look at how evolution plays out in selective breeding *Unnatural Selection* is a stunningly illustrated book about selective breeding the ongoing transformation of animals at the hand of man More important it's a book about selective breeding on a far far grander scale a scale that encompasses all life on Earth We'd call it evolution A unique fusion of art science and history this book celebrates the 150th anniversary of Charles Darwin's monumental work *The Variation of Animals and Plants under Domestication* and is intended as a tribute to what Darwin might have achieved had he possessed that elusive missing piece to the evolutionary puzzle the knowledge of how individual traits are passed from one generation to the next With the benefit of a century and a half of hindsight Katrina van Grouw explains evolution by building on the analogy that Darwin himself

used comparing the selective breeding process with natural selection in the wild and like Darwin featuring a multitude of fascinating examples This is more than just a book about pets and livestock however The revelation of Unnatural Selection is that identical traits can occur in all animals wild and domesticated and both are governed by the same evolutionary principles As van Grouw shows animals are plastic things constantly changing In wild animals the changes are usually too slow to see species appear to stay the same When it comes to domesticated animals however change happens fast making them the perfect model of evolution in action Suitable for the lay reader and student as well as the more seasoned biologist and featuring more than four hundred breathtaking illustrations of living animals skeletons and historical specimens Unnatural Selection will be enjoyed by anyone with an interest in natural history and the history of evolutionary thinking

Unnatural Selection Mark Roeder, 2014-10-14 Unnatural Selection is the first book to examine the rise of the technocentric being or geek who personifies a distinct new phase in human evolution People considered geeks often have behavioral or genetic traits that were previously considered detrimental But the new environment of the Anthropocene period the Age of Man has created a kind of digital greenhouse that actually favors their traits enabling many non neurotypical people to bloom They resonate with the technological Zeitgeist in a way that turns their weaknesses into strengths Think of Mark Zuckerberg versus the towering Olympics bound Winklevooss twins in the movie Social Network Roeder suggests that the rise of the geek is not so much the product of Darwinian natural selection as of man made or unnatural selection He explains why geeks have become so phenomenally successful in such a short time and why the process will further accelerate driven by breakthroughs in genetic engineering neuropharmacology and artificial intelligence His book offers a fascinating synthesis of the latest trends in these fields and predicts a twenty first century cognitive arms race in which new technology will enable everyone to become more intelligent and geek like
