Karamouz, 2021-12-28 This book presents three distinct pillars for analysis design and planning urban water cycle and variability as the state of water being landscape architecture as the medium for built by design and total systems as the planning approach The increasing demand for water and urban and industrial expansions have caused myriad environmental social economic and political predicaments More frequent and severe floods and droughts have changed the resiliency and ability of water infrastructure systems to operate and provide services to the public These concerns and issues have also changed the way we plan and manage our water resources Focusing on urban challenges and contexts the book provides foundational information regarding water science and engineering while also examining topics relating to urban stormwater

water supply and wastewater infrastructures It also addresses critical emerging issues such as simulation and economic modeling flood resiliency environmental visualization satellite data applications and digital data model DEM advancements Features Explores various theoretical practical and real world applications of system analysis design and planning of urban water infrastructures Discusses hydrology hydraulics and basic laws of water flow movement through natural and constructed environments Describes a wide range of novel topics ranging from water assets water economics systems analysis risk reliability and disaster management Examines the details of hydrologic and hydrodynamic modeling and simulation of conceptual and data driven models Delineates flood resiliency environmental visualization pattern recognition and machine learning attributes Explores a compilation of tools and emerging techniques that elevate the reader to a higher plateau in water and environmental systems management Water Systems Analysis Design and Planning Urban Infrastructure serves as a useful resource for advanced undergraduate and graduate students taking courses in the areas of water resources and systems analysis as well as practicing engineers and landscape professionals *Handbook of Applied Hydrologic and Water Resources Engineering* Raveendra Kumar Rai, Chandra Shekhar Prasad Ojha, Vijay P. Singh, 2025-02-26

The Handbook of Applied Hydrologic and Water Resources Engineering examines the planning and design of water supply systems flood control works drought mitigation measures navigation facilities and hydraulic structures as well as feasibility and environmental impact studies for various water related projects It is based on the experience gained through consultancy in dealing with various water resources issues and problems teaching and research It serves as a useful resource for graduate students and faculty members in civil engineering agricultural engineering and water resources engineering as well as practicing engineers working in civil environmental and agricultural fields *Advancing Robust Multi-Objective Optimisation Applied to Complex Model-Based Water-Related Problems* Oscar Osvaldo Marquez Calvo, 2020-02-07

The exercise of solving engineering problems that require optimisation procedures can be seriously affected by uncertain variables resulting in potential underperforming solutions Although this is a well known problem important knowledge gaps are still to be addressed For example concepts of robustness largely differ from study to study robust solutions are generally provided with limited information about their uncertainty and robust optimisation is difficult to apply as it is a computationally demanding task The proposed research aims to address the mentioned challenges and focuses on robust optimisation of multiple objectives and multiple sources of probabilistically described uncertainty This is done by the development of the Robust Optimisation and Probabilistic Analysis of Robustness algorithm ROPAR which integrates widely accepted robustness metrics into a single flexible framework In this thesis ROPAR is not only tested in benchmark functions but also in engineering problems related to the water sector in particular the design of urban drainage and water distribution systems ROPAR allows for employing practically any existing multi objective optimisation algorithm as its internal optimisation engine which enables its applicability to other problems as well Additionally ROPAR can be straightforwardly

Micro-scale Hydrology Modelling for Multipurpose Rainwater

Management Mooyoung Han, DucCanh Nguyen, 2018-04-15 Rainwater as a resource has been underrated due to scientific misunderstandings about its quality the lack of hydrologic design tools for small catchments such as roofs the preference for large infrastructures and the small number of successful cases reported This book summarizes 17 years of scientific research operational monitoring and practical demonstration projects made at Seoul National University Rainwater Research Center A new paradigm of rainwater is proposed which is to collect rainwater and use it instead of draining it Based on conventional hydrology and methodology a hydrologic modelling method for micro catchment is suggested By incorporating several controllable measures into the design the system can solve several water related problems such as flooding water conservation emergency water storage and groundwater recharge Now is the time to adapt Many good examples are reported from around the world including South Korea Fifty nine South Korean cities have announced regulations and commitment to become Rain Cities by offering financial incentives to rainwater management systems or subsidizing them This book is written to give hope to those who seek to transform their community from a Drain City to a Rain City It has been prepared to clear the ambiguity about rainwater management and transform the experts as well as the citizens to become active proponents of rainwater This book can be a guide to transform the world into Rain Cities and become a viable solution toward Sustainable Development Goal Number 6
