DIRECTIONS FOR THREADING

Place the spool on spool rack. Take the thread in your left hand holding it fast with the right during the whole threading operation. Pass thread from spool over check spring K at top of face and down under point L; now pull thread upward until it passes through the eye of spring N and into notch O, then into end of take-up P. **Take up** the thread through slot R in end of needle bar and through eye of needle from left to right, allowing about 2" of thread when take-up is at its highest point.

To draw up the lower thread, raise the presser-foot, take hold of end of upper thread and turn the hand-wheel counter-clockwise moving upper side of wheel from rest which will draw the lower thread up through needle hole.

Pass the ends of both threads under the presser-foot and you will be ready to sew.

Note.—Do not run the machine with the presser-foot down on the feed with out cloth under it. Do not pull cloth in or from you in such a manner as to bend needle.

THE TENSION

The illustration shows represents the Tension Regulator and Indicator for the upper thread, an entirely new and useful device. The half circle is marked with a scale ranging from 1 to 8, with the word "loose" at fig. 1 and "tight" at 8, 1 being the slack and 8 the tightest tension.

OIL PLACES AS INDICATED BELOW

TO CHANGE THE LENGTH OF STITCH

The regulator is located at the right end of machine on the front side of case. TO SHORTEN, which means the lower slack, TO LENGTHEN, which means bring up No. 1 indicates the shortest, and No. 8 the longest stitch.

TO REGULATE THE TENSION

To loosen the tension, turn the thumb-screw on the dial to the left which will move the pointer toward figure 1. To tighten it, turn to the right, moving the pointer toward No. 8. By this means the same tension can always be duplicated, thus obviating the necessity of experimental trials, as is the case with other machines. If a slight tension is desired, both upper and under threads must necessarily be tight. If the upper thread is tight and the lower thread loose, the upper thread will be drawn to the top of the work. If the lower thread is too tight, it will be drawn straight to the bottom of goods, thus **loose**. When you desire the goods to look alike on both sides, and in shape, balance the tension thus **loose**.

THE TENSION RELEASE

The tension release is operated by the presser-foot lift. By means of it, all tension is taken off the upper thread when the presser-foot is raised and the work can be taken out without pulling the thread down by hand.

PARTICULAR NOTICE.—The tension cannot be regulated when the upper is up. The tension is operated by the presser-foot lift.
