The book first introduces the type I type II and heterotic superstring theories and their interactions. It then goes on to present important recent discoveries about strongly coupled strings beginning with a detailed treatment of D branes and their dynamics and covering string duality M theory and black hole entropy and discusses many classic results in conformal field theory. The final four chapters are concerned with four dimensional string theories and have two goals to show how some of the simplest string models connect with previous ideas for unifying the Standard Model and to collect many important and beautiful general results on world sheet and spacetime symmetries.

Ralph Blumenhagen, Dieter Lüst, Stefan Theisen, 2012-10-04. The purpose of this book is to thoroughly prepare the reader for research in string theory at an intermediate level. As such it is not a compendium of results but intended as textbook in the sense that most of the material is organized in a pedagogical and self contained fashion. Beyond the basics a number of more advanced topics are introduced such as conformal field theory superstrings and string dualities. The text does not cover applications to black hole physics and cosmology nor strings theory at finite temperatures. End of chapter references have been added to guide the reader wishing to pursue further studies or to start research in well defined topics covered by this book.
