Rapid Modelling for Increasing Competitiveness Gerald Reiner, 2009-06-13 A Perspective on Two Decades of Rapid Modeling It is an honor for me to be asked to write a foreword to the Proceedings of the 1st Rapid Modeling Conference In 1987 when I coined the term Rapid Modeling to denote queuing modeling of manufacturing systems I never imagined that two decades later there would be an international conference devoted to this topic I am delighted to see that there will be around 40 presentations at the conference by leading researchers from around the world and about half of these presentations are represented by written papers published in this book I congratulate the conference organizers and program committee on the success of their efforts to hold the first ever conference on Rapid Modeling Attendees at this conference might find it interesting to learn about the history of the term Rapid Modeling in the context it is used here During the fall of 1986 I was invited to a meeting at the Headquarters of the Society of Manufacturing Engineers SME in Dearborn Michigan By that time I had successfully demonstrated several industry applications of queuing network models at leading manufacturers in the USA Although in principle the use of queuing networks to model manufacturing systems was well known in the OR/MS community and many papers had been published the actual use of such models by manufacturing professionals was almost nonexistent

Modelling Command and Control Neville A. Stanton, Chris Baber, 2017-10-23 Since its inception just after the Second World War Human Factors research has paid special attention to the issues surrounding human control of systems Command and control environments continue to represent a challenging domain for human factors research Modelling Command and Control takes a broad view of command and control research to include C2 command and control C3 command control and communication and C4 command control communication and computers as well as human supervisory control paradigms The book presents case studies in diverse military applications for example land sea and air of command and control The book explores the differences and similarities in the land sea and air domains the theoretical and methodological developments approaches to system and interface design and the workload and situation awareness issues involved It places the role of humans as central and distinct from other aspects of the system Using extensive case study material Modelling Command and Control demonstrates how the social and technical domains interact and why each require equal treatment and importance in the future
