Uncertainty Underground Allison Macfarlane, Rodney C. Ewing, 2006 Experts from science industry and government discuss the unresolved scientific and technical issues surrounding the Yucca Mountain site as a geologic repository for high level nuclear waste

Volcanic and Tectonic Hazard Assessment for Nuclear Facilities Charles B. Connor, Neil A. Chapman, Laura J. Connor, 2009-08-27 Geoscientists worldwide are developing and applying methodologies to estimate geologic hazards associated with the siting of nuclear facilities Understanding such hazards particularly in the context of the long functional lifetimes of many nuclear facilities is challenging This book documents the current state of the art in volcanic and tectonic hazard assessment for proposed nuclear facilities which must be located in areas where the risks associated with geologic processes are quantifiable and demonstrably low Specific topics include overviews of volcanic and tectonic processes the history of development of hazard assessment methodologies description of current techniques for characterizing hazards and development of probabilistic methods for estimating risks Hazard assessment examples are drawn from around the world This volume will promote interest and debate about this important topic among researchers and graduates developing methods in geologic hazard assessment geologists and engineers who assess the safety of nuclear facilities and regulatory bodies that evaluate such assessments

Geological Disposal of Carbon Dioxide and Radioactive Waste: A Comparative Assessment Ferenc L. Toth, 2011-02-21 Fossil fuels will remain the backbone of the global energy economy for the foreseeable future The contribution of nuclear energy to the global energy supply is also expected to increase With the pressing need to mitigate climate change and reduce greenhouse gas emissions the fossil energy industry is exploring the possibility of carbon dioxide disposal in geological media Geological disposal has been studied for decades by the nuclear industry with a view to ensuring the safe containment of its wastes Geological disposal of carbon dioxide and that of

radioactive waste gives rise to many common concerns in domains ranging from geology to public acceptance In this respect comparative assessments reveal many similarities ranging from the transformation of the geological environment and safety and monitoring concerns to regulatory liability and public acceptance issues However there are profound differences on a broad range of issues as well such as the quantities and hazardous features of the materials to be disposed of the characteristics of the targeted geological media the site engineering technologies involved and the timescales required for safe containment at the disposal location There are ample opportunities to learn from comparisons and to derive insights that will assist policymakers responsible for national energy strategies and international climate policies

The Conscious Planet Neil M. Pine,2013-07-16 The writing of this book was both a spiritual and intellectual journey It took more than ten years to complete while having to be revised and updated constantly This is no holds barred literature where the author says what he means and means what he says He does not mint his words The Conscious Planet thinks outside the box and breaks all the rules of traditional thinking Sometimes this information can be brutally honest or painfully real This author is not trying to win any popularity contest He tells it like it really is and doesnt care what anyone thinks The Conscious Planet is what the government and big corporations who control it dont want you to know It is the truth about the truth and nothing but the truth so help me In the modern world people only know what multinational corporations want them to know not what they should know And it is this tainted knowledge which is creating a society of pathetic drones who like poor doomed sheep are too busy just trying to survive to see that the wool is being pulled over their eyes while being led to slaughter Because these corporate imperatives are being paid for at the expense of the future of mankind Before you patronize any product be conscious about what its doing to your health to the earth and how it will affect future generations Skeptics have warned the author that this book will receive nominal success that it represents a small niche market and not everyone would be interested in such literature And in retort to this assertion it should be acknowledged that yes it is sadly true that not everyone would be interested in this book because the information herein may not pertain directly to their life or general well being So in understanding who would be interested in this book lets narrow it down by eliminating the types of individual who would not directly benefit x 1 People who are immortal Yes these people might not care about this book heck if you were immortal you might eat Twinkies and cheese burgers all day long 2 People who have another planet to live on This is true why would they care if the world goes to hell in a hand basket See Ya Well lucky them however for the other seven billion people who inhabit the planet earth who are not immortal and who dont have another planet to live on then this book is absolutely the most important book they may ever read Become a part of The Conscious Planet

The Dilemma of Siting a High-Level Nuclear Waste Repository D. Easterling, Howard Kunreuther, 2013-12-01 This book explores siting dilemmas situations in which an authority e g Congress a consortium of utilities deems it in the best interest of society to build a facility such as an incinerator but opponents living near the proposed site thwart the plan Facility developers typically attribute local opposition to selfishness or radically inaccurate views of the risks posed by the facility We examine the validity of these conclusions by looking in depth at the psychological response that arises when residents are faced with the prospect of living near waste disposal facilities The particular siting dilemma considered in this book is the problem of how to dispose of the high level nuclear wastes accumulating at nuclear power plants in the United States These wastes in the form of spent fuel rods will emit dangerous levels of radioactivity for thousands of years anywhere between 10 000 and 100 000 years depending on the margin of safety one adopts The current proposal is to encase the spent fuel in corrosion resistant canisters and then to bury these canisters deep underground in a geologic repository The two of us became involved with the high level waste issue in 1986 as part of an interdisciplinary research team hired by the State of Nevada The charge of this team was to estimate the socioeconomic impacts that would accompany a repository if it were built at Yucca Mountain approximately 100 miles northwest of Las Vegas

The Power of Promise M V Ramana, 2012-12-15 Nuclear power has been held out as possibly the most important source of energy for India And the dream of a nuclear powered India has been supported by huge financial budgets and high level political commitment for over six decades Nuclear power has also been presented as safe environmentally benign and cheap Physicist and writer M V Ramana offers a detailed narrative of the evolution of India's nuclear energy programme examining different aspects of it and the claims of success made on its behalf In *The Power of Promise* he makes a historically nuanced and compelling argument as to why the nuclear energy programme has failed in the past and why its future is dubious Ramana shows that nuclear power has been more expensive than conventional forms of electricity generation that the ever present risk of catastrophic accidents is heightened by observed organizational inadequacies at nuclear facilities and that existing nuclear fuel cycle facilities have been correlated with impacts on public health and the environment He offers detailed information and analysis that should serve to deepen the debate on whether India should indeed embark on a massive nuclear programme
