,1980 **Mathematics of Planet Earth** Hans Kaper,Christiane Rousseau,2015-03-31 Our planet faces many challenges In 2013 an international partnership of more than 140 scientific societies research institutes and organizations focused its attention on these challenges This project was called Mathematics of Planet Earth and featured English and French language blogs accessible to nonmathematicians as part of its outreach activities This book is based on more than 100 of the 270 English language blog posts and focuses on four major themes A Planet to Discover A Planet Supporting Life A Planet Organized by Humans A Planet at Risk Source inconnue *Jetlag* Denis Beckett,2001 The man from Beckett s Trek exchanges camera for keyboard enquires and pulls off a remarkable feat He takes a real life tale of work and finance and economics a tale with an extremely well known last line and tells it as grippingly as a thriller **The Problem with Software** Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn t teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not

that good at it In The Problem with Software Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It's an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship

Big Data Brian Clegg,2017-08-03 Is the Brexit vote successful big data politics or the end of democracy Why do airlines overbook and why do banks get it wrong so often How does big data enable Netflix to forecast a hit CERN to find the Higgs boson and medics to discover if red wine really is good for you And how are companies using big data to benefit from smart meters use advertising that spies on you and develop the gig economy where workers are managed by the whim of an algorithm The volumes of data we now access can give unparalleled abilities to make predictions respond to customer demand and solve problems But Big Brother s shadow hovers over it Though big data can set us free and enhance our lives it has the potential to create an underclass and a totalitarian state With big data ever present you can t afford to ignore it Acclaimed science writer Brian Clegg a habitual early adopter of new technology and the owner of the second ever copy of Windows in the UK brings big data to life
