Why Sex Matters A Darwinian Look At Human Behavior

Stephen Davies

Why Sex Matters A Darwinian Look At Human Behavior:

Why Sex Matters Bobbi S. Low, 2015-01-04 Why are men like other primate males usually the aggressors and risk takers Why do women typically have fewer sexual partners In *Why Sex Matters* Bobbi Low ranges from ancient Rome to modern America from the Amazon to the Arctic and from single celled organisms to international politics to show that these and many other questions about human behavior largely come down to evolution and sex More precisely as she shows in this uniquely comprehensive and accessible survey of behavioral and evolutionary ecology they come down to the basic principle that all organisms evolved to maximize their reproductive success and seek resources to do so but that sometimes cooperation and collaboration are the most effective ways to succeed This newly revised edition has been thoroughly updated to include the latest research and reflect exciting changes in the field including how our evolutionary past continues to affect our ecological present

Why Sex Matters Bobbi S. Low, 2000 **A Mind Of Her Own** Anne Campbell, 2013-05-16 When Darwin proposed that females shape evolution by being choosy in their choice of male suitors his Victorian contemporaries were shocked that he accorded so much importance to women But this early view of the female role was far from revolutionary They were simply allowed to be passive quality controllers of male genes Recent years have shown that the inert coy female is a myth For a male a high sex drive and a taste for variety may improve his fitness But for a female successful reproduction goes far beyond copulation She bears the brunt of parental investment with each child represents years of commitment from pregnancy and breast feeding to provisioning and guarding For her genetic lineage to survive she must do this better than her rivals Each of us comes from a line of winning mothers Women are after all the first and default sex It is women who bear children A child born with a single X chromosome can survive but not one with a single Y In a population crash a female biased population will survive far better than a male heavy one In this book Anne Campbell redresses the balance of evolutionary theory in favour of women She examines how selection pressures have shaped the female mind over thousands of generations Their emotions friendship competition aggression and mate choice She brings together data from neuroscience endocrinology anthropology primatology as well as psychology to address fundamental questions about sex differences Why are women less aggressive than men Were women designed for monogamy or promiscuity What do women compete for Why is conflict between males and females inevitable What makes each woman unique Have contraception and IVF subverted the process of natural selection

Animal Talk Tim Friend, 2004 The first book to tell the grand story of animal communication to the lay reader and to reveal unique insights into how systems of communication in the animal kingdom may have provided the foundation for our own language

The Artful Species: Aesthetics, Art, and Evolution Stephen Davies, 2012-11-29 The *Artful Species* explores the idea that our aesthetic responses and art behaviors are connected to our evolved human nature Our humanoid forerunners displayed aesthetic sensibilities hundreds of thousands of years ago and the art standing of prehistoric cave paintings is virtually uncontested In

Part One Stephen Davies analyses the key concepts of the aesthetic art and evolution and explores how they might be related He considers a range of issues including whether animals have aesthetic tastes and whether art is not only universal but cross culturally comprehensible Part Two examines the many aesthetic interests humans take in animals and how these reflect our biological interests and the idea that our environmental and landscape preferences are rooted in the experiences of our distant ancestors In considering the controversial subject of human beauty evolutionary psychologists have traditionally focused on female physical attractiveness in the context of mate selection but Davies presents a broader view which decouples human beauty from mate choice and explains why it goes more with social performance and self presentation Part Three asks if the arts together or singly are biological adaptations incidental byproducts of nonart adaptations or so removed from biology that they rate as purely cultural technologies Davies does not conclusively support any one of the many positions considered here but argues that there are grounds nevertheless for seeing art as part of human nature Art serves as a powerful and complex signal of human fitness and so cannot be incidental to biology Indeed aesthetic responses and art behaviors are the touchstones of our humanity

Cultural Psychology of Immigrants Ramaswami Mahalingam, 2013-12-19 This new volume provides an interdisciplinary perspective on how intersections of race class gender sexuality and culture shape the cultural psychology of immigrants It demonstrates the influence transnational ties and cultural practices and beliefs play on creating the immigrant self Distinguished scholars from a variety of fields examine the cultural psychological consequences of displacement among different immigrant communities Cultural Psychology of Immigrants opens with a variety of theoretical perspectives on immigration and a historical overview of sociological research on immigrants It then examines the racial discrimination of immigrants and the multifaceted influences on the creation of immigrant identities The final section documents the pivotal role of family contexts in shaping identity Each chapter illustrates the commonalities and differences among immigrants in the ways in which they make sense of their newfound selves in a displaced context Intended for advanced students and researchers in the fields of psychology social work marriage and family therapy public health anthropology sociology education and ethnic studies the book also serves as a resource in courses on cultural psychology immigrant studies minority groups race and ethnic relations self and identity culture and human development and immigrants and mental health

Adornment Stephen Davies, 2020-01-09 Elaborating the history variety pervasiveness and function of the adornments and ornaments with which we beautify ourselves this book takes in human prehistory ancient civilizations hunter foragers and present day industrial societies to tell a captivating story of hair skin and make up practices across times and cultures From the decline of the hat the function of jewelry and popularity of tattooing to the wealth of grave goods found in the Upper Paleolithic burials and body painting of the Nuba we see that there is no one who does not adorn themselves their possessions or their environment But what messages do these adornments send Drawing on aesthetics evolutionary history archaeology ethology anthropology psychology cultural history

and gender studies Stephen Davies brings together African Australian and North and South American indigenous cultures and unites them around the theme of adornment He shows us that adorning is one of the few social behaviors that is close to being genuinely universal more typical and extensive than the high minded activities we prefer to think of as marking our species religion morality and art Each chapter shows how modes of decoration send vitally important signals about what we care about our affiliations and backgrounds our social status and values In short by using the theme of bodily adornment to unify a very diverse set of human practices this book tells us about who we are Posthuman Folklore Tok

Thompson,2019-09-25 Can a monkey own a selfie Can a chimp use habeas corpus to sue for freedom Can androids be citizens Increasingly such difficult questions have moved from the realm of science fiction into the realm of everyday life and scholars and laypeople alike are struggling to find ways to grasp new notions of personhood Posthuman Folklore is the first work of its kind both an overview of posthumanism as it applies to folklore studies and an investigation of vernacular posthumanisms the ways in which people are increasingly performing the posthuman Posthumanism calls for a close investigation of what is meant by the term human and a rethinking of this our most basic ontological category What exactly is human What exactly am I There are two main threads of posthumanism the first dealing with the increasingly slippery slope between human and animal and the second dealing with artificial intelligences and the growing cyborg quality of human culture This work deals with both these threads seeking to understand the cultural roles of this shifting notion of human by centering its investigation into the performances of everyday life From funerals for AIBOs to furies to ghost stories told by Alexa people are increasingly engaging with the posthuman in myriad everyday practices setting the stage for a wholesale rethinking of our humanity In Posthuman Folklore author Tok Thompson traces both the philosophies behind these shifts and the ways in which people increasingly are enacting such ideas to better understand the posthuman experience of contemporary life

The Ancestress Hypothesis Kathryn Coe,2003 In our society it has long been believed that art serves very little social purpose Evolutionary anthropologists however are examining a potential role for art in human evolution Kathryn Coe looks to the visual arts of traditional societies for clues Because they are passed down from previous generations traditional art forms such as body decoration funeral ornaments and ancestral paintings offer ways to promote social relationships among kin and codescendants of a common ancestor Mothers used art forms to anchor themselves and their kin to the father and his kin and to promote the survival and reproductive success of kin and descendants Individuals who abided by this strategy accompanied by its strict codes of cooperation left more descendants than did individuals who did not Over time given this reproductive success large numbers of individuals would be identified as codescendants of a common ancestor and would cooperate as if they were close kin These cooperative codescendants were more likely to survive and leave descendants With each new generation these clans propagated not only their genes but also their behavioral strategy the replication or presence of art The book concludes by examining the changing characteristics of visual art including a higher value on

creativity competition and cost when traditional constraints on social behavior disappear **Rethinking Sociological Theory** Stephen K. Sanderson, 2015-11-17 Stephen K Sanderson's latest book recaptures a scientific theoretical sociology one whose fundamental aim is the formulation of real theories that can be empirically tested Sanderson reviews the major theoretical traditions within contemporary sociology explicating their key principles critically evaluating these principles and their applications and showcasing exemplars He judges each tradition by asking whether it has generated falsifiable research programs Although principally a work of theoretical critique Rethinking Sociological Theory is also a valuable textbook for both undergraduate and graduate courses in sociological theory
