The Uncanny Experiments In Cyborg Culture:

The Uncanny Bruce Grenville, 2001 Documenting the image of the cyborg in all its imaginative guises *THE UNCANNY* includes essays and excerpts by Allan Antliff Bruno Bettelheim Randy Lee Cutler Freud William Gibson Bruce Grenville Makiko Hara Donna Haraway Masanori Oda Jeanne Randolph and Toshiya Ueno One of the most persistent and intriguing cultural images of the last century the cyborg exists at the intersection of science technology and culture and is understood here as an uncanny image that reflects our shared fascination and dread of the machine and its presence in our daily lives

Experiments with Body Agent Architecture Alessandro Ayuso, 2022-03-31 *Experiments with Body Agent Architecture* puts forward the notion of body agents non ideal animate and highly specific figures integrated with design to enact particular notions of embodied subjectivity in architecture Body agents present opportunities for architects to increase imaginative and empathic qualities in their designs particularly amidst a posthuman condition Beginning with narrative writing from the viewpoint of a body agent an estranged quattrocento spiritello who finds himself uncomfortably inhabiting a digital milieu or as the spiritello calls it *Il Regno Digitale* the book combines speculative historical fiction and original design experiments It focuses on the process of creating the multi media design experiments moving from the design of the body itself as an original prosthetic to architectural proposals emanating from the body A fragmented history of the figure in architecture is charted and woven into the designs with chapters examining Michelangelo's enigmatic figures in his drawings for the New Sacristy in the early sixteenth century Gian Lorenzo Bernini's physically ephemeral putti adorning chapels and churches in the seventeenth century and Austrian artist architect Walter Pichler's personal and prescient figures of the twentieth century

Stories in Post-Human Cultures Adam L. Brackin, Natacha Guyot, 2019-01-04 This volume was first published by Inter Disciplinary Press in 2013 This volume represents the collective visions of twenty one post humanist cyberculture scholars The complimentary and dissenting voices within have been organized into three categories for this work the first within the general category of Post Humanism what it is why it is important and what we as pre post human humans currently know about our culture and the direction it is taking us towards the eventual post human times Next venture into the Cultures in Cyberspace which are shaping our future worlds today for to understand the culture of our interconnectedness is to begin to appreciate the impossibly complex intricacies of the coming age of connectedness To this end New Narrativism becomes our gateway to this future

The Posthuman Condition Kasper Lippert-Rasmussen, Mads Rosendahl Thomsen, Jacob Wamberg, 2012-05-10 If biotechnology can be used to upgrade humans physically and mentally should it be used at all And if so to what extent How will biotechnology affect societal cohesion Can the development be controlled or is this a Pandora's box that should remain closed These are but a few of the perplex questions facing scientists as a result of the increasing ability of technology to change biology and in turn profoundly change human living conditions This development has created a new posthuman horizon that will influence contemporary life and politics in a number of

ways The Posthuman Condition addresses the challenges of Imagining a society where the properties of humans have shifted radically Assessing the scope of deploying technologies that are already underway Basing decisions on an ethical foundation that does not entail a concept of human nature Ascertain the types of political action that can and should be taken in the face of this situation The anthology brings together researchers from a wide range of disciplines biotechnology medicine ethics politics and aesthetics and among contributors are Francis Fukuyama Julian Savulescu Maxwell Mehlman John Harris and Chris Hables Gray *The Enlightenment Cyborg* Allison Muri, 2007-01-01 For many cultural theorists the concept of the cyborg an organism controlled by mechanic processes is firmly rooted in the post modern post industrial post Enlightenment post nature post gender or post human culture of the late twentieth century Allison Muri argues however that there is a long and rich tradition of art and philosophy that explores the equivalence of human and machine and that the cybernetic organism as both a literary figure and an anatomical model has in fact existed since the Enlightenment In *The Enlightenment Cyborg* Muri presents cultural evidence in literary philosophical scientific and medical texts for the existence of mechanically steered or cyber humans in the works seventeenth and eighteenth century thinkers Muri illustrates how Enlightenment exploration of the notion of the man machine was inextricably tied to ideas of reproduction government individual autonomy and the soul demonstrating an early connection between scientific theory and social and political thought She argues that late twentieth century social and political movements such as socialism feminism and even conservatism are thus not unique in their use of the cyborg as a politicized trope *The Enlightenment Cyborg* establishes a dialogue between eighteenth century studies and cyborg art and theory and makes a significant and original contribution to both of these fields of inquiry

Environmental Humanities and the Uncanny Rod Giblett, 2019-04-12 Sigmund Freud's essay *The Uncanny* is celebrating a century since publication It is arguably his greatest and most fruitful contribution to the study of culture and the environment *Environmental Humanities and the Uncanny* brings into the open neglected aspects of the uncanny in this famous essay in its centenary year and in the work of those before and after him such as Friedrich Schelling Walter Benjamin E T A Hoffmann and Bram Stoker This book does so by focussing on religion especially at a time and for a world in which some sectors of the monotheisms are in aggressive and sometimes violent contention against those of other monotheisms and even against other sectors within their own monotheism The chapter on Schelling's uncanny argues that monotheisms come out of polytheism and makes the plea for polytheism central to the whole book It enables rethinking the relationships between mythology and monotheistic and polytheistic religions in a culturally and politically liberatory and progressive way Succeeding chapters consider the uncanny cyborg the uncanny and the fictional and the uncanny and the Commonwealth concluding with a chapter on Taoism as a polytheistic religion Building on the author's previous work in *Environmental Humanities and Theologies* in bringing together theories of religion and the environment this book will be of great interest to students and scholars of the environmental humanities ecocultural studies and religion **When Clothes Become Fashion** Ingrid

Loschek,2009-08-01 When how and why do clothes become fashion Fashion is more than mere clothing It is a moment of invention a distillation of desire a reflection of a zeitgeist It is also a business relying on an intricate network of manufacture marketing and retail Fashion is both medium and message but it does not explain itself It requires language and images for its global mediation It develops from the prescience of the designer and is dependent on acceptance by observers and wearers alike When Clothes Become Fashion explores the structures and strategies which underlie fashion innovation how fashion is perceived and the point at which clothing is accepted or rejected as fashion The book provides a clear theoretical framework for understanding the world of fashion its aesthetic premises plurality of styles performative impulses social qualities and economic conditions Superhuman Japan Marie Thorsten,2012-03-15 This book examines the imaginative narratives that shaped the attitudes of Americans and others toward Japan Focusing on cultural aspects of economic nationalism and US Japan relations during the trade war Marie Thorsten uses examples from public discourse film documentaries novels acts of racism and comparison of international education assessments to examine the way in which Japan has been constituted in a global political gaze as an economic hegemon In times of heightened rivalry we often try to find superior others so that we can motivate ourselves against an imagined future of decline During the Cold War Americans and other nations in the West took advantage of being the underdog against the perceived superiority of the Soviet Union especially by turning the Sputnik launch of 1957 into a lodestone for an educational renaissance As postwar Japanese power became increasingly threatening American policymakers again tried to fashion Japan into another Sputnik to motivate American people This book explores 1980s Bubble Japan as a Superhuman Other in the consciousness of Americans especially as reflected in popular culture and policy discourses Making Japan into a Superhuman often resorted into the same stereotyping that invented Japan as a Subhuman It was difficult for many to see that America Japan and other nations were actually sharing the same global economic circumstances affecting attitudes toward knowledge and nation This book will be of interest to students and scholars of Japanese politics International Relations and Japanese culture and society

Spatiality and Subjecthood in Mallarmé, Apollinaire, Maeterlinck, and Jarry Leo Shtutin,2019-02-07 This study explores the interrelationship between spatiality and subjecthood in the work of Stéphane Mallarmé Guillaume Apollinaire Maurice Maeterlinck and Alfred Jarry Concerned with various modes of poetry and drama it also examines the cross pollination that can occur between these modes focusing on a range of core texts including Mallarmé's *Igitur* and *Un Coup de Dés* Apollinaire's *Zone* and various of his calligrammes Maeterlinck's early one act plays *L'Intruse* *Les Aveugles* and *Intérieur* and Jarry's *Ubu Roi* and *César Antechrist* The poetic and dramatic practices of these four authors are assessed against the broader cultural and philosophical contexts of the fin de siècle The fin de siècle witnessed a profound epistemological shift the Newtonian Cartesian paradigm increasingly challenged throughout the nineteenth century was largely dismantled with ramifications beyond physics philosophy and psychology Chapter 1 introduces three foundational notions Newtonian absolute space the

unitary Cartesian subject and subject object dualism that were challenged and ultimately overthrown in turn of the century science and art Developments in theatre architecture and typographic design are examined against this philosophical backdrop with a view to establishing a diachronic and interdisciplinary framework of the authors in question Chapter 2 focuses on the spatial dimension of Mallarmé's *Un Coup de dés* and Apollinaire's calligrammes works which defamiliarise page space by undermining various naturalised conventions of paginal configuration In Chapter 3 the notion of liminality is implemented in an analysis of character and diegetic space as constructed in Jarry's *Ubu roi* and Maeterlinck's *one acts* Chapters 4 and Chapter 5 undertake a more abstract investigation of parallel inverse processes the subjectivisation of space and the spatialisation of the subject manifest not only in the works of Mallarmé Maeterlinck Apollinaire and Jarry but in the period's poetry and drama more generally

Cyborg Theatre J. Parker-Starbuck, 2011-04-28 This book articulates the first theoretical context for a cyborg theatre metaphorically integrating on stage bodies with the technologized digitized or mediatized to re imagine subjectivity for a post human age It covers a variety of examples to propose new theoretical tools for understanding performance in our changing world
