Making Wise Decisions In A Smart World: Responsible Leadership In An Era Of Artificial Intelligence (Student Edition)

Peter Verhezen, 2023-03-07 Good and smart decisions should be distinguished from wise decision making especially in the age of artificial intelligence AI where algorithms are increasingly used to automate business processes or to augment the accuracy and speed of decisions This book argues why specific forms of intelligence as well as consciousness and enhanced conscience are crucial to make wise decisions with consciousness to be clearly distinguished from intelligence It also addresses why machine learning and smart computers AI are plausibly able to make smart and thus to a certain extent intelligent decisions but definitely unable to help us to become wiser In essence optimizing a desired output in a business context will require a balanced approach with cognitive awareness and ethical reflection synthesizing intuitive and algorithmic thinking encompassing short term profit and longer term envisioning and aiming to optimize created and captured value for shareholders while taking the concerns of those who have a real stake in the organization seriously If business is about creating and sharing value in a future that is both digital and relational then innovative technologies like AI will play an increasingly important role Consequently mindful executives and their responsible boards therefore need to acknowledge the limitations of AI in business especially when the uncertain future is estimated to be rather volatile or ambiguous than stable
