Zend Framework in Action Steven K. J. Brown, Nick Lo, Rob Allen, 2008-11-30. From rather humble beginnings as the Personal Home Page scripting language, PHP has found its way into almost every server corporation and dev shop in the world. On an average day somewhere between 500,000 and 2 million coders do something in PHP. Even when you use a well-understood language like PHP, building a modern web application requires tools that decrease development time and cost while improving code quality. Frameworks such as Ruby on Rails and Django have been getting a lot of attention as a result. For PHP coders, the Zend Framework offers that same promise without the need to move away from PHP. This powerful collection of components can be used in part or as a whole to speed up the development process. Zend Framework has the backing of Zend Technologies, the driving force behind the PHP programming language in which it is written. The first production release of the Zend Framework became available in July of 2007. *Zend Framework in Action* is a comprehensive tutorial that shows how to use the Zend Framework to create web-based applications and web services. This book takes you on an over-the-shoulder tour of the components of the Zend Framework as you build a high-quality real-world web application. This book is organized around the techniques you'll use every day as a web developer: data handling, forms, authentication, and so forth. As you follow the running example, you'll learn to build interactive Ajax-driven features into your application without sacrificing nuts and bolts considerations like security and performance. This book is aimed at the competent PHP developer who wants to master framework-driven web development. *Zend Framework in Action* goes beyond the docs but still provides quick access to the most common topics encountered in the development of web applications. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code.
