The Structure Of Spoken Language Intonation In Romance:

The Structure of Spoken Language Philippe Martin, 2015-11-26 Using an innovative approach this book focuses on a widely debated area of phonetics and phonology intonation and specifically its relation to metrics its interface with syntax and whether it can be attributed more to phonetics or phonology or equally to both Drawing on data from six Romance languages French Italian Spanish Portuguese Catalan and Romanian whose rich intonation patterns have long been of interest to linguists Philippe Martin challenges the assumptions of traditional phonological approaches and re evaluates the data in favour of a new usage based model of intonation He proposes a unified description of the sentence prosodic structure focusing on the dynamic and cognitive aspects of both production and perception of intonation in speech leading to a unified grammar of Romance languages sentence intonation This book will be welcomed by researchers and advanced students in phonetics and phonology

The Structure of Spoken Language Jean-Philippe Martin, 2015 One of the most remarkable features of phonation is the disruption of the normal respiratory cycle Indeed outside phonation the normal cycle of respiration presents a comparable duration for both the inspiration and the expiration top of Figure 1 1 Figure 1 1 Respiration cycle without phonation top and with phonation bottom The first produced prosodic units are breath groups At early stages of language learning children mainly use the necessary silent pause in the inspiration phase of their respiratory cycle as boundary markers of these units The phonation process results from the air flow generated by the lung compression during the respiration expiration phase This air flow generates the necessary subglottal pressure needed to produce the vibration of the vocal folds for voiced sounds vowels voiced consonants friction for fricative consonants and intraoral pressure to allow the production of stop consonants

Manual of Romance Phonetics and Phonology Christoph Gabriel, Randall Gess, Trudel Meisenburg, 2021-11-22 This handbook is structured in two parts it provides on the one hand a comprehensive synchronic overview of the phonetics and phonology including prosody of a breadth of Romance languages and focuses on the other hand on central topics of research in Romance segmental and suprasegmental phonology including comparative and diachronic perspectives Phonetics and phonology have always been a core discipline in Romance linguistics the wide synchronic variety of languages and dialects derived from spoken Latin is extensively explored in numerous corpus and atlas projects and for quite a few of these varieties there is also more or less ample documentation of at least some of their diachronic stages This rich empirical database offers excellent testing grounds for different theoretical approaches and allows for substantial insights into phonological structuring as well as into incipient ongoing or concluded processes of phonological change The volume can be read both as a state of the art report of research in the field and as a manual of Romance languages with special emphasis on the key topics of phonetics and phonology

Science, technology and art in the spoken expression of meaning Plinio Almeida Barbosa, Sandra Madureira, Åsa Abelin, 2023-08-31 [Information](#)

[Structure in Lesser-described Languages](#) Evangelia Adamou, Katharina Haude, Martine Vanhove, 2018-08-02 The articles

compiled in this volume offer new insights into the wealth of prosodic and syntactic phenomena involved in the encoding of information structure categories. They present data from languages which are rarely if ever taken into account in the most prominent approaches in information structure theory and which belong to the Afroasiatic, Amerindian, Australian, Caucasian and Niger Congo language stocks. In addition to the significant descriptive value of these pioneering contributions, several studies also draw attention to previously undescribed or typologically rare phenomena. By adapting a variety of methods to underdescribed and endangered languages ranging from experimental to naturalistic corpus studies, this volume also aims to serve as an invitation for further research in this direction.

In Search of Basic Units of Spoken Language Shlomo Izre'el, Heliana Mello, Alessandro Panunzi, Tommaso Raso, 2020-06-15. What is the best way to analyze spontaneous spoken language? In their search for the basic units of spoken language, the authors of this volume opt for a corpus-driven approach. They share a strong conviction that prosodic structure is essential for the study of spoken discourse and each bring their own theoretical and practical experience to the table. In the first part of the book, they segment spoken material from a range of different languages: Russian, Hebrew, Central Pomo (an indigenous language from California), French, Japanese, Italian, and Brazilian Portuguese. In the second part of the book, each author analyzes the same two spoken English samples but looking at them from different perspectives using different methods of analysis as reflected in their respective analyses in Part I. This approach allows for common tendencies of segmentation to emerge both prosodically and segmentally.

The Study of Speech Processes Victor J. Boucher, 2021-01-21. By upending traditional perspectives, this book gives a biologically grounded understanding of how spoken language conveys meaning.

Tone in Yongning Na Alexis Michaud, 2025-05-20. Yongning Na, also known as Mosuo, is a Sino-Tibetan language spoken in Southwest China. This book provides a description and analysis of its tone system, progressing from lexical tones towards morphotonology. Tonal changes permeate numerous aspects of the morphosyntax of Yongning Na. They are not the product of a small set of phonological rules but of a host of rules that are restricted to specific morphosyntactic contexts. Rich morphotonological systems have been reported in this area of Sino-Tibetan, but book-length descriptions remain few. This study of an endangered language contributes to a better understanding of the diversity of prosodic systems in East Asia. The analysis is based on original fieldwork data made available online, collected over the course of ten years commencing in 2006. This book is a new edition of <https://langsci.press.org/catalog/book/109>.

Spoken Language Corpus and Linguistic Informatics Yuji Kawaguchi, Susumu Zaima, Toshihiro Takagaki, 2006-12-13. Linguistic Informatics is a research field named by the Center of Excellence (COE) Program Usage-Based Linguistic Informatics (UBLI), which aims to systematically integrate studies in computer science, linguistics, and language education. The first part of this volume contains three lectures on spoken language analysis and corpus linguistics delivered at the Second International Conference on Linguistic Informatics held on December 10, 2005. The nine contributions in the second part come from the Collaboration Workshop on spoken language corpora between UBLI and C-ORAL ROM, a consortium

researching the spoken Romance languages In the third part four studies representative of Linguistic Informatics are presented These studies deal with 1 Corpus based analysis of linguistic usages 2 Typological study of different languages 3 Effective integration of e learning and task based face to face teaching and 4 Fosterage of language education researchers with expertise in the field of Linguistic Informatics The Oxford Handbook of Language Prosody Carlos Gussenhoven,Aoju Chen,2021-01-07 This handbook presents detailed accounts of current research in all aspects of language prosody written by leading experts from different disciplines The volume s comprehensive coverage and multidisciplinary approach will make it an invaluable resource for all researchers students and practitioners interested in prosody
