McKittrick,2022-03-17 This thesis studies the impact of teaching intelligent design to evangelical students Science is often presented as a reason why some find sharing their faith difficult in a secular culture teaching the science of intelligent design enables Christians to initiate conversations and overcome obstacles with those whose worldview is more Darwinian and materialist The professional doctoral research employs both action research and practical theology Lin Norton s pedagogical action research provides the structure for the qualitative research and thematic analysis showing that students find learning about intelligent design empowering for evangelism Richard Osmer s model of practical theology enables an interdisciplinary reflection on how intelligent design challenges Western secular culture Intelligent design is seen as the most integrative of all the different ways of relating science and theology Theologically teaching intelligent design is like teaching a modern parable to contemporary society and just like the Gospel parables some respond with faith and some reject it Evangelical students find learning about it both liberating and empowering in their ability to share their faith more confidently with others especially in schools and youth groups **Undoing Ethics** Natasha Whiteman,2012-01-07 Over the past decade researchers from different academic disciplines have paid increasing attention to the productivity of online environments The ethical underpinnings of research in such settings however remain contested and often controversial As traditional debates have been reignited by the need to respond to the particular characteristics of technologically mediated environments researchers have entered anew key debates regarding the moral legal and regulative aspects of research ethics A growing trend in this work has been towards the promotion of localized and contextualized research ethics the suggestion that the decisions we make should be informed by the nature of the environments we study and the habits expectations of participants within them Despite such moves the relationship between the empirical theoretical and methodological aspects of Internet research ethics remains underexplored Drawing from ongoing sociological research into the practices of media cultures online this book provides a timely and distinctive response to this need This book explores the relationship between the production of ethical stances in two different contexts the ethical manoeuvring of participants within online media fan communities and the ethical decision making of the author as Internet researcher manoeuvring as it were in the academic community In doing so the book outlines a reflexive framework for exploring research ethics at different levels of analysis the empirical settings of research the theoretical perspectives which inform the researcher s

objectification of the research settings and the methodological issues and practical decisions that constitute the activity as research. The analysis of these different levels develops a way of thinking about ethical practice in terms of stabilizing and destabilizing moves within and between research and researched communities. The analysis emphasizes the continuities and discontinuities between both research practice and online media fan activity and social activity in on and offline environments.

The Student's Guide to Research Ethics Paul Oliver, 2003. This title examines the ethical issues and questions which occur in university and professional research. The book helps both beginning and experienced researchers to identify ethical issues when they are conducting research and attempts to resolve those issues. Enhancing Learning and Teaching in Higher Education: Engaging with the Dimensions of Practice John Lea, 2015-08-16. The core purpose of this distinctive book is to offer academics working in higher education practical support in achieving formal accreditation of their teaching practice with the Higher Education Academy (HEA). It maps a range of key themes against the UKPSF (United Kingdom Professional Standards Framework) and invites readers to engage with the all important dimensions of practice. This book is relevant both to those who are in the process of preparing an application for an HEA fellowship and to those who are preparing assignments they might be producing for a PG Cert HE programme. The book explains the dimensions of practice in detail and offers readers suggestions for ways in which they might engage with particular aspects of the UKPSF at the end of each section and thus evidence the quality of their teaching practice. Each section also offers suggestions on ways to develop teaching as related to the themes. Its distinctive features include: Linking explicitly to the UKPSF (UK Professional Standards Framework) and offering practical advice to those making a fellowship application; Integrating this practical element with some of the wider debates about the purpose of higher education; Incorporating a thread of student engagement throughout the book including students' own perspectives on the themes of the book. Not only will the book support academics following an accreditation route, the book will also be a useful companion text on taught courses since the UKPSF is the overarching framework for people working in HE in a teaching capacity. Whether you are working in higher education or working in college-based higher education, then this is the book for you.
