The Rebirth of Environmentalism Douglas Bevington, 2009-09-22 Over the past two decades a select group of small but highly effective grassroots organizations have achieved remarkable success in protecting endangered species and forests in the United States The *Rebirth of Environmentalism* tells for the first time the story of these grassroots biodiversity groups Author Douglas Bevington offers engaging case studies of three of the most influential biodiversity protection campaigns the Headwaters Forest campaign the zero cut campaign on national forests and the endangered species litigation campaign exemplified by the Center for Biological Diversity providing the reader with an in depth understanding of the experience of being involved in grassroots activism Based on first person interviews with key activists in these campaigns the author explores the role of tactics

strategy funding organization movement culture and political conditions in shaping the influence of the groups He also examines the challenging relationship between radicals and moderate groups within the environmental movement and addresses how grassroots organizations were able to overcome constraints that had limited the advocacy of other environmental organizations Filled with inspiring stories of activists groups and campaigns that most readers will not have encountered before *The Rebirth of Environmentalism* explores how grassroots biodiversity groups have had such a big impact despite their scant resources and presents valuable lessons that can help the environmental movement as a whole as well as other social movements become more effective Book Jacket *New Geographies of the American West* William Riebsame Travis, 2007-05-11 Examines contemporary land use changes and development patterns from the Mississippi to the Pacific and assesses the ecological and social outcomes of Western development This work suggests that functional and attractive settlement can be embedded in preserved lands working landscapes and healthy ecologies **Qué pasa** , 2008 *American Book Publishing Record* , 2005 *Fire Management in the American West* Mark Hudson, 2011-10-01 Most journalists and academics attribute the rise of wildfires in the western United States to the USDA Forest Service's successful fire elimination policies of the twentieth century However in *Fire Management in the American West* Mark Hudson argues that although a century of suppression did indeed increase the hazard of wildfire the responsibility does not lie with the USFS alone The roots are found in the Forest Service's relationships with other more powerful elements of society the timber industry in particular Drawing on correspondence both between and within the Forest Service and the major timber industry associations newspaper articles articles from industry outlets and policy documents from the late 1800s through the present Hudson shows how the US forest industry under the constraint of profitability pushed the USFS away from private industry regulation and toward fire exclusion eventually changing national forest policy into little more than fire policy More recently the USFS has attempted to move beyond the policy of complete fire suppression Interviews with public land managers in the Pacific Northwest shed light on the sources of the agency's struggles as it attempts to change the way we understand and relate to fire in the West *Fire Management in the American West* will be of great interest to environmentalists sociologists fire managers scientists and academics and students in environmental history and forestry *Living with Fire* Sara E. Jensen, Guy R. McPherson, 2008-08-04 Fire both inevitable and ubiquitous plays a crucial role in North American ecosystems But as necessary as fire is to maintaining healthy ecosystems it threatens human lives and livelihoods in unacceptable ways This volume explores the rich yet largely uncharted terrain at the intersection of fire policy fire science and fire management in order to find better ways of addressing this pressing dilemma Written in clear language it will help scientists policy makers and the general public especially residents of fire prone areas better understand where we are today in regard to coping with wildfires how we got here and where we need to go Drawing on abundant historical and analytic information to shed new light on current controversies *Living with Fire* offers a dynamic new paradigm for coping with fire that recognizes its critical

environmental role The book also tells how we can rebuild the important ecological and political processes that are necessary for finding better ways to cope with fire and with other complex policy dilemmas

Wildfire Policy Dean Lueck, Karen M. Bradshaw, 2013-06-17 During the five decades since its origin law and economics has provided an influential framework for addressing a wide array of areas of law ranging from judicial behaviour to contracts This book will reflect the first ever forum for law and economics scholars to apply the analysis and methodologies of their field to the subject of wildfire The only modern legal work on wildfire the book brings together leading scholars to consider questions such as How can public policy address the effects of climate change on wildfire and wildfire on climate change Are the environmental and fiscal costs of ex ante prevention measures justified What are the appropriate levels of prevention and suppression responsibility borne by private state and federal actors Can tort liability provide a solution for realigning the grossly distorted incentives that currently exist for private landowners and government firefighters Do the existing incentives in wildfire institutions provide incentives for efficient private and collective action and how might they be improved

Wildfire Alianor True, 2013-04-10 During the summer of 2000 Americans from coast to coast witnessed the worst fire season in recorded history Daily news reports brought dramatic images of vast swaths of land going up in smoke from the mountains of Montana and Wyoming to the scrublands of Texas to Los Alamos New Mexico where a controlled burn gone awry threatened forests homes and even our nation's nuclear secrets As they have for centuries wildfires captured our attention and our imagination reminding us of the power of the natural forces that shape our world In *Wildfire* A Reader nature writer and wildland firefighter Alianor True gathers together for the first time some of the finest stories and essays ever written about wildfire in America From Mark Twain to Norman Maclean to Edward Abbey writers featured here depict and record wildfires with remarkable depth and clarity An ecological perspective is well represented through the works of John Muir Aldo Leopold and John McPhee Ed Engle Louise Wagenknecht and Gretchen Yost firefighters from the front lines give us exciting first person perspectives reliving their on the ground encounters with forest fires The works gathered in *Wildfire* not only explore the sensory and aesthetic aspects of fire but also highlight how much attitudes have changed over the past 200 years From Native Americans who used fire as a tool to early Americans who viewed it as a frightening and destructive force to Aldo Leopold and other conservationists whose ideas caused us to rethink the value and role of fire this rich collection is organized around those shifts in thinking Capturing the fury and the heat of a raging inferno or the quiet emergence of wildflowers sprouting from ashes the writings included in *Wildfire* represent a vital and compelling addition to the nature writing and natural history bookshelf

Forests Under Fire Christopher J. Huggard, Arthur R. Gomez, 2001-03 A collection of writings on the environmental crisis of the Southwestern forests by historians specializing in either the environment or the Southwest criticizing forest management practices devoted to exploiting the forest for timber grazing and recreation with insufficient regard for ecological balance

America's Fires Stephen J. Pyne, 2009 America's Fires reviews the historical context of our
