Unemployment Social Vulnerability And Health In Europe Health Systems Research:

Unemployment, Social Vulnerability, and Health in Europe Detlef Schwefel, Per-Gunnar Svensson, Herbert Zöllner, 2012-12-06 It is not easy to summarize the studies that have dealt with the health effects of unemployment on the unemployed. The main problem impeding a comparison of their results is the diversity of theoretical constructs associated with physical and especially mental health and above all an apparently inexhaustible variety of operationalizations of these constructs. It is significant that the six conclusions drawn from the present state of unemployment research by the organizers of a recent conference on the individual and social consequences of unemployment included the following request: In view of the relevant constructs it seems to be most urgent to find or to develop operationalizations which can be agreed upon in order to guarantee comparability of research results. Kieselbach and Wacker 1985 p. XX my translation. Nevertheless the results of these studies allow the statement that a negative influence of job loss on psychological well-being can be regarded as a validated finding. The influence on physical health however must be assessed very carefully and in a differentiated manner. The few investigations dealing with this question arrive at different conclusions, moreover possibly relieving effects of unemployment on health come into sight.
