

ENTROPY, DISORDER

Entropy is the degree of randomness in a substance. This implies that change in entropy in ΔS , implies how more ordered and how less ordered. Molecules with smaller number have more ordered because they move about more slowly, and gases have an even larger amount of entropy. According to the thermodynamics of the molecules, subject to change in ordering in a state of highest entropy.

Entropy increases when the following reactions occur and decrease in entropy in reverse (products ΔS or decrease ΔS).

HEAT, FREE ENERGY, ENTROPY

The equation for Gibbs Free Energy is $\Delta G = \Delta H - T\Delta S$

How is related to the spontaneity, the sign for ΔG that is the negative, ΔG represents the heat of products, ΔH is the change in entropy, T is temperature in Kelvin.

A negative value for ΔG means that the reaction is spontaneous. That means that heat is released.

A positive value for ΔG means that the reaction is non-spontaneous. That means that heat is absorbed.

A negative value for ΔS means that the products are more ordered than the reactants.

A positive value for ΔS means that the products are less ordered than the reactants.
