Unit Natural Disasters Primary School:

International Perspectives on Natural Disasters: Occurrence, Mitigation, and Consequences Joseph P. Stoltzman, John Lidstone, Lisa M. DeChano, 2007-03-11 Reports of natural disasters fill the media with regularity. Places in the world are affected by natural disaster events every day. Such events include earthquakes, cyclones, tsunamis, wildfires; the list could go on for considerable length. In the 1990s, there was a concentrated focus on natural disaster information and mitigation during the International Decade for Natural Disasters Reduction (IDNDR). The information was technical and provided the basis for major initiatives in building structures designed for seismic safety, slope stability, severe storm warning systems, and global monitoring and reporting. Mitigation or planning in the event that natural hazards prevalent in a region would suddenly become natural disasters was a major goal of the decade-long program. During the IDNDR, this book was conceptualized and planning for its completion began. The editors saw the need for a book that would reach a broad range of readers who were not actively or directly engaged in natural disasters relief or mitigation planning but who were in decision-making positions that provided an open window for addressing natural disaster issues. Those people were largely elected public officials, teachers, non-governmental organization staff, and staff of faith-based organizations. Those people, for the most part, come to know very well the human and physical characteristics of the place in which they are based. With that local outreach in mind, the editors intended the book to encourage readers to 1

Pandemics and natural disasters as reflected in history teaching Council of Europe, 2023-03-01 Covid-19 disastrous series of earthquakes in Türkiye and Syria. How well prepared are young people to understand such catastrophic events and their impact upon societies? Since the beginning of recorded human history, pandemics and natural disasters have highly impacted the historical narratives of mankind. Each time they remind humans how fragile they are and how limited their knowledge is. Despite their impact, these events are given little attention in history education. The first thematic report of the Observatory on History Teaching in Europe (OHTe) analyses how pandemics and natural disasters are taught across different levels of education. It gives a detailed overview of the teaching of the two topics in OHTe's 16 member states along with a cross-country analysis combining information provided by educational authorities and by history teachers themselves. The report refers to important areas of concern such as the inclusion of pandemics and natural disasters in history curricula, teachers' pedagogical decisions about their teaching, multiperspectival approaches, but also the use of scapegoating during these times of crises. The observatory's mission is to provide a clear picture of the state of history teaching in Europe. Within the countries that are party to the observatory, this is done through OHTe reports on the state of history teaching and thematic reports which explore particular areas of interest and how they are handled in history lessons. The observatory's vision is embodied by its motto: Teaching history grounding democracy. In practice, this means that it promotes quality history education in order to improve the understanding of democratic culture among young people. The Observatory on History Teaching in Europe is a Council of Europe enlarged
