

Universal Nonverbal Intelligence Test (UNIT)

The Universal Nonverbal Intelligence Test (UNIT) was designed as an appropriate measure of intelligence (reasoning and memory) for students who have problems with language that would limit their ability to show their true abilities on more traditional tests of intelligence. Tasks on this test are given in a nonverbal (gestural) format, and responses are also nonverbal. The tasks measure a broad range of complex memory and reasoning abilities, including both verbal (symbolic) and nonverbal mediation. Subtest scaled scores have an average of 10 and a standard deviation of 3. Standard scores have an average of 100 and a standard deviation of 15. The percentile rank indicates the percentage of children of the same age who score the same as or lower than this student.

The UNIT has the option of using an Abbreviated (3 subtests), Standard (4 subtests), or Extended (6 subtests) Battery. The Standard Battery consists of the first four subtests and is suitable for eligibility and diagnostic decision making. The Extended Battery consists of all six subtests and provides the most in-depth diagnostic data of the three test batteries. Memory subtests measure recall of content, location, and sequence. Reasoning subtests measure pattern processing, problem solving, understanding of relationships, and planning abilities.

**For the purposes of this assessment, the Standard Battery was used.
