The Use Of Tumor Models In Immunotoxicity Testing:

The Use of Tumor Models in Immunotoxicity Testing Nancy I. Kerkvliet, OREGON STATE UNIV CORVALLIS SCHOOL OF VETERINARY MEDICINE., 1983 The role of the immune system in the prevention and control of tumor growth has been a rapidly expanding area of research during the past decade The concept that a host could immunologically recognize and thus eliminate transformed cells from the body offered many new prospects for the prevention and treatment of cancer From a toxicology standpoint however immunologic control of tumor growth presented an additional area for concern that is that even if a chemical was not directly carcinogenic it might through effects on the immune system create an individual that was more susceptible to tumor growth and thus present an even more subtle hazard than a direct carcinogen Because of the biologic and toxicologic relevance of a tumor model our laboratory has been working to develop suitable tumor models for use in immunotoxicity testing In addition to the toxicologic significance of altered tumor susceptibility due to chemical exposure a tumor model could also provide several testing advantages from a technical standpoint

Medicine & Biology, 1984-02-14 Toxicology in Transition Gisela H. Degen, Jürg P. Seiler, Philip Bentley, 2012-12-06 The volume contains the main papers presented at the 1994 EUROTOX Congress Basel Switzerland August 21-24 1994 Toxicology has become a less descriptive science because more importance has been placed on the mechanisms underlying toxic effects This is reflected in symposia and workshops devoted to species differences in organ toxicity receptor mediated toxicity and stereochemical effects of xenobiotics Recent progress in the fields of immunotoxicology ecotoxicology and neurotoxicology is highlighted and documented together with the present discussion on harmonized regulatory guidelines

Clinical Environmental Health and Toxic Exposures John Burke Sullivan, Gary R.
