The Vulnerability Of Cities Natural Disasters And Social Resilience:

The Vulnerability of Cities Mark Pelling, 2012-06-25 When disaster strikes in cities the effects can be catastrophic compared to other environments But what factors actually determine the vulnerability or resilience of cities The Vulnerability of Cities fills a vital gap in disaster studies by examining the too often overlooked impact of disasters on cities the conditions leading to high losses from urban disasters and why some households and communities withstand disaster more effectively than others Mark Pelling takes a fresh look at the literature on disasters and urbanization in light of recent catastrophes He presents three detailed studies of cities in the global South drawn from countries with contrasting political and developmental contexts Bridgetown Barbados a liberal democracy Georgetown Guyana a post socialist state and Santo Domingo Dominican Republic an authoritarian state in democratic transition This book demonstrates that strengthening local capacity through appropriate housing disaster preparedness infrastructure and livelihoods is crucial to improving civic resilience to disasters Equally important are strong partnerships between local community based organizations external non governmental and governmental organizations public and private sectors and between city and national government The author highlights and discusses these best practices for handling urban disasters With rapid urbanization across the globe this book is a must read for professionals policy makers students and researchers in disaster management urban development and planning transport planning architecture social studies and earth sciences

The Environmental Advantages of Cities William B. Meyer, 2013 An analysis that offers evidence to challenge the widely held assumption that urbanization and environmental quality are necessarily at odds

Cities on a Finite Planet Sheridan Bartlett, David Satterthwaite, 2016-04-14 Cities on a Finite Planet Transformative responses to climate change shows how cities can combine high quality living conditions resilience to climate change disaster risk reduction and contributions to mitigation low carbon development It also covers the current and potential contribution of cities to avoiding dangerous climate change and is the first book with an in depth coverage of how cities and their governments citizens and civil society organizations can combine these different agendas based on careful city level analyses The foundation for the book is detailed city case studies on Bangalore Bangkok Dar es Salaam Durban London Manizales Mexico City New York and Rosario Each of these was led by authors who contributed to the IPCC s Fifth Assessment and are thus acknowledged as among the world s top specialists in this field This book highlights where there is innovation and progress in cities and how this was achieved Also where there is little progress and no action and where there is no capacity to act It also assesses the extent to which cities can address the Sustainable Development Goals within commitments to also dramatically reduce greenhouse gas emissions In this it highlights how much progress on these different agendas depends on local governments and their capacities to work with their low income populations

Cities at Risk Professor Gary Sands, Professor Pierre Filion, Professor Mark Skidmore, 2015-11-28 How do cities prepare for and recover from natural disasters In this book the authors provide a broad

overview of the issues related to the impacts of disasters on cities around the world from assessing risks to accounting for damages. The comparative approach across different types of disasters in a range of urban locations is useful in identifying opportunities for policy transfer. While there is no one size fits all solution to hazard mitigation, valuable lessons can be learned from the experiences of others. The chapters emphasize different modes for assessing hazard risk as well as strategies for increasing the resiliency of vulnerable populations.

Earthquake Disasters Jiuping Xu, Yi Lu, Edmund C. Penning-Rowsell, 2021-09-26. This book explores practices and approaches on pre disaster prevention and post disaster reconstruction for vulnerable countries and areas enhancing earthquake disaster resilience. Destructive earthquakes have frequently occurred in urban or rural areas around the world causing severe damage on human societies. Pre earthquake prevention and post earthquake reconstruction effect the disaster resilience building and long term development of the affected communities and areas. In recent years researchers from around the world have made a lot of efforts to study on the theme earthquake disaster prevention and reconstruction. The chapters in this edited volume contribute to the literature of earthquake disaster research from scientific social and institutional aspects. These interdisciplinary studies mainly focus on human and policy dimensions of earthquake disaster such as earthquake risk mitigation social physical resilience building resilience capability assessment healthcare surge capacity house reconstruction the roles of schools households civil societies and public participation in earthquake disaster prevention and reconstruction. The authors come from several countries including China Bangladesh Iran New Zealand Saudi Arabia the United Kingdom Denmark and Indonesia covering the cases from those countries prone to earthquakes. These nine distinctive chapters have been elaborately selected and integrated from the international ranked peer reviewed journal *Environmental Hazards*.

Cities of the Global South Reader Faranak Miraftab, Neema Kudva, 2014-10-10. The *Cities of the Global South Reader* adopts a fresh and critical approach to the field of urbanization in the developing world. The Reader incorporates both early and emerging debates about the diverse trajectories of urbanization processes in the context of the restructured global alignments in the last three decades. Emphasizing the historical legacies of colonialism the Reader recognizes the entanglement of conditions and concepts often understood in binary relations: first third worlds wealth poverty development underdevelopment and inclusion exclusion. By asking whose city whose development the Reader rigorously highlights the fractures along lines of class race gender and other socially and spatially constructed hierarchies in global South cities. The Reader's thematic structure where editorial introductions accompany selected texts examines the issues and concerns that urban dwellers planners and policy makers face in the contemporary world. These include the urban economy housing basic services infrastructure the role of non state civil society based actors planned interventions and contestations the role of diaspora capital the looming problem of adapting to climate change and the increasing spectre of violence in a post 9/11 transnational world. The *Cities of the Global South Reader* pulls together a diverse set of readings from scholars across the world some of which have been written

specially for the volume to provide an essential resource for a broad interdisciplinary readership at undergraduate and postgraduate levels in urban geography urban sociology and urban planning as well as disciplines related to international and development studies Editorial commentaries that introduce the central issues for each theme summarize the state of the field and outline an associated bibliography They will be of particular value for lecturers students and researchers making the *Cities of the Global South Reader* a key text for those interested in understanding contemporary urbanization processes

Cities and Nature Lisa Benton-Short, John Rennie Short, 2013-05-29 *Cities and Nature* connects environmental processes with social and political actions The book reconnects science and social science to demonstrate how the city is part of the environment and how it is subject to environmental constraints and opportunities This second edition has been extensively revised and updated with in depth examination of theory and critical themes Greater discussion is given to urbanization trends and megacities the post industrial city and global economic changes developing cities and slums urban political ecology the role of the city in climate change and sustainability The book explores the historical relationship between cities and nature contemporary challenges to this relationship and attempts taken to create more sustainable cities The historical context situates urban development and its impact on the environment and in turn the environmental impact on people in cities This provides a foundation from which to understand contemporary issues such as urban political ecology hazards and disasters water quality and supply air pollution and climate change The book then considers sustainability and how it has been informed by different theoretical approaches Issues of environmental justice and the role of gender and race are explored The final chapter examines the ways in which cities are practicing sustainability from light greening efforts such as planting trees to more comprehensive sustainability plans that integrate the multiple dimensions of sustainability The text contains case studies from around the globe with many drawn from cities in the developing world as well as reviews of recent research updated and expanded further reading to highlight relevant films websites and journal articles This book is an asset to students and researchers in geography environmental studies urban studies and planning and sustainability **Open**
