The White Rhino Saga:

The White Rhino Saga Ian Player, 1973 **African Rhino** Richard Emslie, 1999 The black and the white rhinoceros have become flagship species for international conservation They are significant not only for the continuation of a major evolutionary heritage but also as symbols for the protection of African savannahs The battle for the survival of these species has been marked by some notable successes and sadly many failures and the situation is still critical The international horn trade ban and the domestic bans imposed in most traditional user states have driven the trade further underground in some cases inflating prices and making illegal dealing even more lucrative This Plan is aimed at donors government and non government organizations and all those involved in rhino conservation It outlines the actions and strategies needed to catalyse support for these majestic animals and help secure their future in sub Saharan Africa The overall conclusion is that given the political will stability and adequate field expenditure rhinos can be conserved in the wild Against Extinction William (Bill) Adams, 2013-06-17 Conservation in the 21st century needs to be different and this book is a good indicator of why Bulletin of British Ecological Society Against Extinction tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day It vividly portrays conservation s legacy of big game hunting the battles for the establishment of national parks the global importance of species conservation and debates over the sustainable use of and trade in wildlife Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit How can preservation be reconciled with human rights and the development needs of the poor Is conservation something that can be imposed by a knowledgeable elite or is it something that should emerge naturally from people s free choices These have never been easy questions and they are as important in the 21st century as at any time in the past The author takes us on a lively historical journey in search of the answers **National Park Science** Jane Carruthers, 2017-08-17 South Africa is renowned for its wildlife and environmental conservation in iconic national parks such as the Kruger one of the world s first formal protected areas However this is the first book to thoroughly analyse and explain the interesting and changing scientific research that has been accomplished in South Africa s national parks during the twentieth century Providing a fascinating and thorough historical narrative based on an extensive range of sources this text details the evolution of traditional natural history pursuits to modern conservation science in South Africa covering all research areas of conservation biology and all the national parks around the country It reveals the interaction between the international context government learning institutions and the public that has shaped the present conservation arena A complex story that will interest and inform not only those involved in conservation science of South Africa but worldwide

The Scientific Imagination in South Africa William Beinart, Saul Dubow, 2021-05-20 South Africa provides a unique

vantage point from which to examine the scientific imagination over the last three centuries when its position on the African continent made it a staging post for Portuguese Dutch and British colonialism In the eighteenth century South African plants and animals caught the imagination of visiting Europeans In the nineteenth century science became central to imperial conquest devastating wars agricultural intensification and the exploitation of rich mineral resources Scientific work both facilitated and offered alternatives to the imposition of segregation and apartheid in the twentieth century William Beinart and Saul Dubow offer an innovative exploration of science and technology in this complex divided society Bridging a range of disciplines from astronomy to zoology they demonstrate how scientific knowledge shaped South Africa's peculiar path to modernity In so doing they examine the work of remarkable individual scientists and institutions as well as the contributions of leading politicians from Jan Smuts to Thabo Mbeki
