Understanding Understanding Essays On Cybernetics And Cognition:

Understanding Understanding Heinz von Foerster, 2007-05-08 In these essays Heinz von Foerster discusses some of the fundamental principles that govern how we know the world and how we process the information from which we derive that knowledge Included are path breaking articles concerning the principles of computation in neural nets 1967 the definition of self organizing systems 1960 the nature of cognition 1970 as well as recent expansions on these themes e g How recursive is communication 1993 Working with Norbert Wiener Warren McCullough and others in the 1960s and 1970s von Foerster was one of the founders of the science of cybernetics which has had profound effects both on modern systems theory and on the philosophy of cognition At the Biological Computer Laboratory at the University of Illinois he produced the first parallel computers and contributed to many other developments in the theory of computation and cognition *Ranulph Glanville and How to Live the Cybernetics of Unknowing* Soren Brier, Phillip Guddemi, Louis H. Posthumanism: A Guide for the Perplexed Peter Mahon, 2017-02-23 In Posthumanism A Guide for the Perplexed Peter Mahon goes beyond recent theoretical approaches to the posthuman to argue for a concrete posthumanism which arises as humans animals and technology become entangled in science society and culture Concrete posthumanism is rooted in cutting edge advances in techno science and this book offers readers an exciting fresh and innovative exploration of this undulating and often unstable terrain With wide ranging coverage of cybernetics information theory medicine genetics machine learning politics science fiction philosophy and futurology Mahon examines how posthumanism played and continues to play a crucial role in shaping how we understand our world This analysis of posthumanism centers on human interactions with tools and technology the centrality of science as well as an understanding of techno science as a pharmakon an ancient Greek word for a substance that is both poison and cure Mahon argues that posthumanism must be approached with an interdisciplinary attitude a concrete posthumanism is only graspable through knowledge derived from science and the humanities He concludes by sketching a post humanities to help us meet the challenges of posthumanism challenges to which we all must rise Posthumanism A Guide for the Perplexed provides a concise detailed and coherent exploration of posthumanism introducing key approaches concepts and themes It is ideal for readers of all stripes who are interested in a concrete posthumanism and require more than just a simple introduction

Interpreting and Explaining Transcendence Robert A. Yelle, Jenny Ponzio, 2021-09-07 In this volume an interdisciplinary group of scholars uses history sociology anthropology and semiotics to approach Transcendence as a human phenomenon and shows the unavoidability of thinking with and through the Beyond Religious experience has often been defined as an encounter with a transcendent God Yet humans arguably have always tried to get outside or beyond themselves and society The drive to exceed some limit or condition of finitude is an enduring aspect of

culture even in a disenchanted society that may have cut off most paths of access to the Beyond The contributors to this volume demonstrate the humanity of Transcendence in various ways as an effort to get beyond our crass physical materiality as spiritual entrepreneurship as the ecstasy of rituals of possession and as a literary aesthetic and semiotic event These efforts build from a shared conviction that Transcendence is thoroughly human and accordingly avoid purely confessional and parochial approaches while taking seriously the various claims and behavioral expressions of traditions in which Transcendence has been understood in theological terms

Neocybernetics and Narrative Bruce Clarke, 2014-09-15 Neocybernetics and Narrative opens a new chapter in Bruce Clarke's project of rethinking narrative and media through systems theory Reconceiving interrelations among subjects media significations and the social this study demonstrates second order systems theory's potential to provide fresh insights into the familiar topics of media studies and narrative theory A pioneer of systems narratology Clarke offers readers a synthesis of the neocybernetic theories of cognition formulated by biologists Humberto Maturana and Francisco Varela incubated by cyberneticist Heinz von Foerster and cultivated in Niklas Luhmann's social systems theory From this foundation he interrogates media theory and narrative theory through a critique of information theory in favor of autopoietic conceptions of cognition Clarke's purview includes examinations of novels Mrs Dalloway and Mind of My Mind movies Avatar Memento and Eternal Sunshine of the Spotless Mind and even Aramis Bruno Latour's idiosyncratic meditation on a failed plan for an automated subway Clarke declares the era of the cyborg to have ended laid to rest as the ontology of technical objects is brought into differential coordination with operations of living psychic and social systems The second order discourse of cognition destabilizes the usual sense of cognition as conscious awareness revealing the possibility of nonconscious and nonhuman forms of sentience

New Horizons For Second-order Cybernetics Alexander Riegler, Karl H Muller, Stuart A Umpleby, 2017-09-15 In almost 60 articles this book reviews the current state of second order cybernetics and investigates which new research methods second order cybernetics can offer to tackle wicked problems in science and in society The contributions explore its application to both scientific fields such as mathematics psychology and consciousness research and non scientific ones such as design theory and theater science The book uses a pluralistic multifaceted approach to discuss these applications Each main article is accompanied by several commentaries and author responses which together allow the reader to discover further perspectives than in the original article alone This procedure shows that second order cybernetics is already on its way to becoming an idea shared by many researchers in a variety of disciplines

Arguments for Learning Bill Cope, Walter Feinberg, 2025-03-11 Almost every educational idea worth a thought has been considered at the University of Illinois and anything worth trying has been tested In this history of ideas Bill Cope and Walter Feinberg chronicle the intellectual lives of education thinkers at the university while tracking the development of educational ideas and practices in general Cope and Feinberg draw on conversations narratives and archival research that reveal how different generations explored their role in

defining and carrying out the College's multifaceted mission. Their account raises critical questions about the character of learning, the aims of teaching, and the nature of teaching as a profession. At the same time, the authors address issues that range from the role of schools in fostering individual and collective identity to the introduction of computer-mediated and online learning. Cope and Feinberg examine changes in self-understanding about fundamental ideas and chart how the College evolved from its original narrow mission of training children's schoolteachers to embracing global perspectives. A wide-ranging portrait of an institution. *Arguments for Learning* uses the School of Education to tell the stories of thinkers dedicated to the idea that education can change the world for the better.

Design Cybernetics Thomas Fischer, Christiane M. Herr, 2019-07-30 *Design Cybernetics* Navigating the New Design cybernetics offers a way of looking at ourselves: curious, creative, and ethical humans as self-organising systems that negotiate their own goals in open-ended explorations of the previously unknown. It is a theory of and for epistemic practices: learning, designing, researching, that is deeply committed to the autonomy of others and hence offers no prescriptive methodology. Design cybernetics describes design practice as inextricable from conversation, a way of enquiring, developing shared understanding and reaching the new that harnesses reliable control as well as error and serendipity. Recognising circular causality, observer dependency, and non-determinability, design cybernetics extends beyond tenets of scientific research into the creative, ethical, and aesthetic domain. From this perspective, design is not an ill-conceived subset of scientific research. Instead, scientific research emerges as a particularly restricted subset of the broader human activity of design. This volume offers a cross-section of design cybernetic theory and practice with contributions ranging across architecture, interior lighting studies, product design, embedded systems, design pedagogy, design theory, social transformation, design research, epistemology, art and poetics, as well as theatre and acting. Addressing designers, design educators, and researchers interested in a rigorous practice-based epistemology, it establishes design cybernetics as a foundational perspective of design research. This is a conceptually elegant, well-structured, and comprehensive presentation of design cybernetics. It fills a gap in the literature of the field. Ken Friedman, Chair Professor, Tongji University. This book offers a valuable and timely introduction to second-order cybernetics as society grapples with complex issues like climate change and rising inequality. Joichi Ito, Director of the MIT Media Lab.

Theories and Models of Communication Paul Coble, Peter J. Schulz, 2013-01-30 This unique volume offers an overview of the diversity in research on communication, including perspectives from biology, sociality, economics, norms, and human development. It includes general social science and humanities approaches to communication, from systems theory to cultural theory, as well as perspectives more specifically related to communication acts such as linguistics and cognition. The volume also features chapters on the participants and various elements in communication processes, on possible effects, and on wider consequences of mediation with technical media. The scope of the contributions is global, and the volume is relevant to both the empirical and the philosophical traditions in human sciences. Designed as a stand-alone collection to engage

Traditions of Systems Theory Darrell Arnold, 2013-12-17 The term systems theory is used to characterize a set of disparate yet related approaches to fields as varied as information theory cybernetics biology sociology history literature and philosophy What unites each of these traditions of systems theory is a shared focus on general features of systems and their fundamental importance for diverse areas of life Yet there are considerable differences among these traditions and each tradition has developed its own methodologies journals and forms of analysis This book explores this terrain and provides an overview of and guide to the traditions of systems theory in their considerable variety The book draws attention to the traditions of systems theory in their historical development especially as related to the humanities and social sciences and shows how from these traditions various contemporary developments have ensued It provides a guide for strains of thought that are key to understanding 20th century intellectual life in many areas

Problem-Based Learning and Proprioception Boris Aberšek, 2018-07-27 Contemporary teaching and learning methods based on cognitive neuroscience deal with such questions as How do we think and How do we learn or How does the human memory work Innovative approaches in this field tackle the subject of human mentality by connecting discoveries from a range of disciplines that shed light on cognitive occurrences and the learning process Especially over the last decade one of

the key trends in this field has focused on the connection between humans and machines technologies and more concretely on the link between human and artificial intelligence Contemporary technologies based on AI will undoubtedly play a critical role in shaping the society of the future This book which is the final part of a trilogy on research in the area of philosophy of education following *Virtual Teacher* *Cognitive Approach to e Learning* *Material and Cognitive Education* and *Transdisciplinary Models for Teaching* embarks on an ambitious journey of providing potential explanations of how to optimally meet the needs and requirements of our future society Thus the primary purpose of this book is to shed light on issues related to teaching and learning based on contemporary trends and approaches from the field of information and communication technologies and artificial intelligence Furthermore it relates the above to the set up of modern learning environments whether they are referred to as intelligent learning materials e learning materials intelligent tutoring systems ITS or learning management systems LMS With this in mind a universal meta model cognitive machine for a contemporary transdisciplinary learning strategy is proposed here based on cybernetic theory and methods of AI The book may well provoke cognitive dissonance and intellectual unease as it explores cognitive theories and inspires researchers and teachers to update and invigorate some of the theories that have been embedded in their minds since their own school years In order for this to happen it provides readers with many valuable insights and introduces new experiences resulting from alternative teaching practices

Performing Complexity: Building Foundations for the Practice of Complex Thinking Ana Teixeira de Melo, 2020-04-28 In the face of growing challenges we need modes of thinking that allow us to not only grasp complexity but also perform it In this book the author approaches complexity from the standpoint of a relational worldview The author recasts complex thinking as a mode of coupling between an observer and the world Further she explores the process and outcome of that coupling namely meaningful information that may have transformative effects and impact the management of change in the real world The author presents a new framework for operationalising complex thinking in a set of dimensions and properties through which it may be enacted This framework may inform the development and coordination of new tools and strategies to support the practice and evaluation of complex thinking across a variety of domains Intended for a wide interdisciplinary audience of academics practitioners and policymakers alike the book is an invitation to pursue inter and transdisciplinary dialogues and collaborations

Neither Vertical Nor Horizontal Rodrigo Nunes, 2021-05-25 How do we organize in a world after both Occupy and the Sanders campaign A decade ago a wave of mass mobilisations described as horizontal and leaderless swept the planet holding the promise of real democracy and justice for the 99% Many saw its subsequent ebb as proof of the need to go back to what was once called the question of organisation For something so often described as essential however political organisation remains a surprisingly under theorised field In this book Rodrigo Nunes proposes to remedy that lack by starting again from scratch Redefining the terms of the problem he rejects the confusion between organisation and any of the forms it can take such as the party and argues that organisation must be understood as always supposing a diverse ecology of different initiatives and organisational forms Drawing from a wide array of sources and traditions that include cybernetics poststructuralism network theory and Marxism Nunes develops a grammar that eschews easy oppositions between verticalism and horizontalism centralisation and dispersion and offers a fresh approach to enduring issues like spontaneity leadership democracy strategy populism revolution and the relationship between movements and parties
