

The background of the cover is a dark green, textured surface, possibly a microscopic view of a plant or soil. Overlaid on this is a light green grid. Several white squares are placed at various intersections of the grid: one in the upper left, one in the upper middle, one in the upper right, one in the lower left, one in the lower middle, and one in the lower right. A cluster of small, white, circular structures, resembling pollen grains or spores, is visible in the center of the cover, partially overlapping the grid and the title area.

This population increase will be focused in urban areas and in what are currently viewed as developing countries meaning that the buying power of this increased population will be greater shifting the balance of demand from staple crops to high value items such as meat and dairy products Overall that the world will have to approximately double agricultural output across all categories of food to meet the demands of this larger urbanised population This is occurring against a backdrop of equally large challenges in terms of global climate change Agriculture is already a significant contributor to e g greenhouse gas emissions deforestation and soil erosion The situation is made more complex by an increased emphasis on biofuels as a solution for our imminent oil shortage resulting in increased competition between land utilised for food and fuel In short agriculture must continue to feed the world whilst not contributing to damaging it further It must be sustainable Plant breeding plays a significant but frequently understated role in meeting the challenges presented by this complex and changing scenario However plant breeding and improvement is itself undergoing radical change driven by technology This book explores how forage and turf breeding is changing and adapting to meet these challenges using the technological advances being experienced in plant breeding as a whole
