People and Computers XIV — Usability or Else! Sharon McDonald,Yvonne Waern,Gilbert Cockton,2012-12-06 Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing The Web is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and GPS and other sensors The capability for access anytime and anywhere is here The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices We have proposed a general technique that promises to assist in mediating access It capitalises on advantages afforded by computation Hollan Stometta 1992 We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts One such activity gaining immediate access is currently of growing importance because of expanding connectivity via wireless technology Cell phones and related technologies make it possible to be constantly available for synchronous interaction At times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users
