User Guide Thermo 20 Genesys:

Thermo-Hydro-Mechanical (THM) coupled simulations of innovative enhanced geothermal systems for heat and electricity production as well as energy storage Muhammad Haris,2022-08-05 Enhanced geothermal systems EGSs evolved from the hot dry rock can provide a significant amount of energy while shifting towards negligible carbon emission In order to investigate some important issues related to EGS several scenarios have been analyzed using powerful numerical tools FLAC3Dplus and TOUGH2MP TMVOC While conducting multiple hydraulic fracturing it is observed that the newly created successive fracture s configuration highly depends on the previous one under the influence of stress shadow Therefore the assumption of using similar multiple fracture geometries and shapes for energy exploitation may lead to erroneous estimations A case study has been performed further using the engineering data of the GeneSys project in the North German Basin Numerous scenarios have been investigated and the optimized EGS project is proposed whose installed power capacity of one side of the injection well declines from 7 17 MW to 5 08 MW over 30 years Moreover the Levelized cost of electricity is calculated at 5 46 c kWh which is quite economical compared to the current electricity price Finally an innovative concept of regenerative EGS is proposed by storing surplus renewable energy in multiple hydraulic fractures that can reduce the reservoir temperature reduction rate The results of continuous injection production cycles depicted that a regenerative EGS could be achieved in reality *American Laboratory* ,2000 *1993 IEEE International Conference on Neural Networks, San Francisco, California, March 28-April 1, 1993* ,1993 Therapeutic RNA Nanotechnology Kirill A. Afonin,Morgan Chandler,2021-07-21 This collection of research articles and reviews covers the latest work in the design delivery dynamic abilities and immune stimulation of RNA nanoparticles which have driven the utilization of their immunomodulatory properties The unknown immune properties of nucleic acid nanoparticles have been a major hurdle in their adaptation until the works herein began assessing their structure activity relationships This collection chronologically follows the path of investigating the recognition of design components to implementing them into nucleic acid nanostructures RNA nanotechnology is an emerging platform for therapeutics with increasing clinical relevance as this approach becomes more widely used and approved for the treatment of various diseases The latest research aims to take advantage of RNA s modular nature for the design of nanostructures which can interact with their environments to communicate programmed messages with intracellular pathways In doing so nanoparticles can be used to elicit or elude responses by the immune system as desired in conjunction with their therapeutic applications Crop Resistance Mechanisms to Alleviate Climate Change-Related Stress Jose Ramon Acosta Motos,Juan De Dios Franco-Navarro,Sara Álvarez,María José Gómez-Bellot,2024-02-20 Anthropogenic activities have aggravated the effects of global climate change on ecosystems Plants because of their inability to escape from an adverse environment suffer to a great extent from stresses which can negatively impact their growth and development Global warming is increasingly causing extreme climatic situations such as very high

or low temperatures drought and flooding events hailstorms wildfires extreme precipitation events and the reduction of fertile soil through desertification and salinization In addition warmer temperatures and higher humidity related with the climate change can also increase pest and disease pressure on plants by altering the geographic range population size and timing of pest and disease outbreaks Taken together abiotic stress related with climate change as drought or extreme temperature can exacerbate the spread and severity of various diseases associated with biotic stress increasing the vulnerability of plants to pathogens some examples include insects fungi bacteria or viruses
