*Monitoring the Performance and Operation of Cellular Radio Interfaces using Professional Measurement Tools.*

Baldomero Coll-Perales, Miguel Sepulcre Ribes, Javier Gozálvez Sempere, 2014-11-11 El presente libro ha sido diseñado para ayudar a los estudiantes del Grado en Ingeniería de Tecnologías de Telecomunicación en el empleo de las herramientas utilizadas en las prácticas de las asignaturas de comunicaciones móviles y para mostrarles cómo analizar y entender los resultados que se obtienen con dichas herramientas. Para ello, en primer lugar, el libro describe de forma didáctica cómo utilizar las herramientas de medida profesionales empleadas en las prácticas de comunicaciones móviles en la UMH. Dichas herramientas se emplean habitualmente por ingenieros de planificación radio para monitorizar en tiempo real el rendimiento de las redes de comunicaciones móviles mediante drive tests. Dicha descripción incluye una presentación detallada de la herramienta de testeo profesional Nemo Handy desarrollada por Anite. Dicha herramienta se incluye en un terminal celular en modo ingeniería empleado para monitorizar en tiempo real el funcionamiento y rendimiento de las redes celulares y tomar medidas para su posterior análisis. Dicho análisis se realiza empleando la herramienta Nemo Outdoor descrita con detalle también en el libro, incluyendo ejemplos sobre cómo realizar los procesos más relevantes. Finalmente, el libro incluye y analiza una serie de medidas que se han realizado en un sistema celular UMTS HSDPA en activo en Elche. En particular, se explica el proceso seguido para realizar dichas medidas empleando Nemo Handy y se analizan mediante Nemo Outdoor las principales funcionalidades de un sistema celular como el establecimiento y finalización de llamadas, la selección y re-selección de celdas, el traspaso y el análisis de las descargas de datos y parámetros radio. This book has been designed to guide the students of the Bachelor's in Telecommunications Technology Engineering towards a clear understanding of how to use the laboratory tools and show them how to analyze and understand the collected measurements. In this context, the book first introduces and describes how to use the professional measurement tools employed in the laboratory activities of the mobile communications course at UMH. These tools are commonly used by cellular radio engineers to monitor in real time the performance of cellular networks through drive tests. The book first presents the Nemo Handy professional measurement testing tool developed by Anite. This tool is included in an engineering mode cellular handset used to monitor in real time the operation of cellular networks and collect measurements for post processing. Such processing is done using the Nemo Outdoor tool that is also introduced in the book, including examples of how to perform the most relevant processing actions. Finally, this book shows how to conduct some measurement and analysis processes using Nemo Handy and Nemo Outdoor. The measurements have been conducted over live UMTS and HSDPA networks in the city of Elche and cover the analysis of important cellular functionalities like establishment and release of a call, cell selection and reselection, handovers and analysis of data downloads and cellular parameters. This chapter shows with practical examples how to conduct the measurements using Nemo Handy and how to interpret with Nemo Outdoor the exchanged cellular signaling messages in order to monitor
