Tryptophan, Serotonin, and Melatonin Gerald Huether, Walter Kochen, Thomas J. Simat, Hans Steinhart, 1999-10-31

This volume contains the proceedings of the Ninth Meeting of the International Study Group for Tryptophan Research ISTRY held at the University of Hamburg Germany from October 10 to 14 1998 At this meeting the recent developments in the field of tryptophan research were presented by leading researchers from all over the world in 81 oral and 48 poster contributions Research on tryptophan and its derivatives provides an inexhaustible subject At the conference we tried to compose a multifaceted picture of the recent investigations through contributions from the major disciplines involved Thus we tried to strike a balance between basic research topics and clinical nutritional or industrial applications We offered workshops on tryptophan in sleep and mood melatonin IDO activation and the eosinophilia myalgia syndrome EMS as a platform for intensive discussion for the participants In these proceedings many contributions are multidisciplinary and have practical or theoretical implications for different research fields Hence we have organized this volume in nine main chapters according to basic disciplines and subjects We are aware that this classification is artificial but we hope that it is the best compromise for contributors and readers

The Functional Roles of Glial Cells in Health and Disease Rebecca Matsas, Marco Tsacopoulos, 2012-12-06 Thirty five years ago when Stephen Kuffler and his colleagues at Harvard initiated a new era of research on the properties and functions of neuroglial cells very few neuroscientists were impressed at the time with the hypothesis that neuroglial cells could have another though more subtle role to play in the nervous system than to provide static support to neurons Today very few neuroscientists are unaware of the fact that multiple interactions between neurons and glial cells have been described and that they constitute the basis for understanding the function and the pathology of the nervous system Glial cells outnumber neurons and make up about one half of the bulk of the nervous system They are divided into two major classes first the macroglia which include astrocytes and oligodendrocytes in the central nervous system and the Schwann cells in the peripheral nervous system and second the microglial cells These different classes of glial cells have different functions and contribute in different ways in the development function and the pathology of the nervous system

Mechanisms in the Pathogenesis of Enteric Diseases 2 Prem S. Paul, David H. Francis, 2012-12-06 This book Mechanisms in the Pathogenesis of Enteric Diseases 2 is an outcome of the Second International Rushmore Conference on Mechanisms in the Pathogenesis of Enteric Diseases held September 3D October 3 1998 in Rapid City South Dakota USA Its chapters represent many of the reviews and papers presented at the conference The meeting was organized by members of the North Central Regional Research Committee NC 62 a consortium of researchers of bovine and swine enteric diseases from land grant institutions supported by the United States Department of Agriculture The Rushmore Conferences were conceived as a forum for an interdisciplinary discussion of mechanisms of infectious enteric diseases It was intended that such a discussion would stimulate cross pollination of ideas and nurture synergistic collaborations among scientists who might otherwise not interact Enteric diseases are caused by widely divergent pathogens and parasites in broadly different settings and affect multiple organ systems Some enteric diseases

affect a single species while others may affect multiple species perhaps including human beings Some enteric diseases were present in antiquity while others have recently emerged Knowledge regarding a particular disease or pathogen has frequently proven useful in understanding another disease or pathogen because common themes in pathogenesis exist As this knowledge base grows strategies in the prevention and control of various enteric diseases often converge Cross disciplinary discussions and collaborations facilitate growth of this knowledge base as well as development of tools for disease interdiction

Colon Cancer Prevention American Institute for Cancer Research, 2012-12-06 The Eighth Annual Research Conference of the American Institute for Cancer Research held in Washington D C September 3-4 1998 was on the subject Colon Cancer Prevention Dietary Modulation of Cellular and Molecular Mechanisms with participants representing various disciplines interested in this area One of the speakers provided an

appropriate quote from 17th century physician Thomas Adams Prevention is better than healing because it saves the labor of being sick which aptly describes the need for the prevention of cancer An overview of normal and abnormal colonic development emphasized that although the typical human colon undergoes 10¹³ cell divisions by age 60 with the associated possibilities for error relatively few colon tumors develop Since dietary modulation leads to extremely small changes in colonic cells over a long period animal models are useful to time observe and delineate the events associated with colon cancer In the development colon cancer the inactivation of the adenomatous polyposis coli Apc gene is one of the earliest known events Normally Apc downregulates the cellular protein beta catenin but this is lost during cancer development Beta catenin may itself be an oncogene it has a short half life but it is stabilized by binding to is more prevalent in the cell nucleus the gene shuttles between the nucleus and the cytoplasm
