Sovacool, Michael H. Dworkin, 2014-09-29 We need new ways of thinking about and approaching the world's energy problems Global energy security and access is one of the central justice issues of our time with profound implications for happiness welfare freedom equity and due process This book combines up to date data on global energy security and climate change with fresh perspectives on the meaning of justice in social decision making Benjamin K Sovacool and Michael H Dworkin address how justice theory can help people to make more meaningful decisions about the production delivery use and effects of energy Exploring energy dilemmas in real life situations they link recent events to eight global energy injustices and employ philosophy and ethics to make sense of justice as a tool in the decision making process They go on to provide remedies and policies that planners and individuals can utilize to create a more equitable and just energy future Applied Mechanics Reviews ,1974 Engineering and Finance ,1923 Proceedings of the Midwest Power Conference Midwest Power Conference, 1946 DOE/FERC. ,1979 Global Energy Politics Thijs Van de Graaf, Benjamin K. Sovacool, 2020-05-07 Ever since the Industrial Revolution energy has been a key driver of world politics From the oil crises of the 1970s to today's rapid expansion of renewable energy sources every shift in global energy patterns has important repercussions for international relations In this new book Thijs Van de Graaf and Benjamin Sovacool uncover the intricate ways in which our energy systems have shaped global outcomes in four key areas of world politics security the economy the environment and global justice Moving beyond the narrow geopolitical focus that has dominated much of the discussion on global energy politics they also deftly trace the connections between energy environmental politics and community activism The authors argue that we are on the cusp of a global energy shift that promises to be no less transformative for the pursuit of wealth and power in world politics than the historical shifts from wood to coal and from coal to oil This ongoing energy transformation will not only upend the global balance of power it could also fundamentally transfer political authority away from the nation state empowering citizens regions and local communities Global Energy Politics will be an essential resource for students of the social sciences grappling with the major energy issues of our times **Companion to Environmental Studies** Noel Castree, Mike Hulme, James D. Federal Power Commission,1968 **Electric Power Generation** Dave Barnett,Kirk Bjornsgaard,2000 Unlike more technical texts stuffed with formulae and theories this book explains in plain English how power is created and replaces formulae with everyday examples and easy to understand illustrations It opens with an explanation of how electricity is generated then covers the planning and development of electric power stations emphasizing modern considerations of merchant power plants repowering and the growth of gas turbine generation The facts of generation are covered in part two boilers turbines generators hydro and pumped storage and alternative generations sources suchs geothermal tidal solar and wind Maintenance and operations are covered in basic overview format Finally environmental considerations again an increasing concern in light of deregulation and environmental law are reviewed In addition the authors cover specific features and fuel types in nontechnical terms Industry newcomers will appreciate this clear explanation of how power is created Proceedings of the Midwest Power Conference ,1946 Hybrid Rail Vehicles Aleksandr Luvishis,2010-05 The book examines the current state of hybrid rail vehicles hybrid locomotives and trains The authors provide both theoretical and practical perspective on hybrid rail vehicles with energy storage and give recommendations about the components that should be used in different types of modern hybrid vehicles *Power* ,1927
