Proceedings of the XIV INTERNATIONAL SYMPOSIUM SYMORG 2014 Aleksandar Marković, Slađana Barjaktarović Rakočević, 2014-06-05 Parallel Agile - faster delivery, fewer defects, lower cost Doug Rosenberg, Barry Boehm, Matt Stephens, Charles Suscheck, Shobha Rani Dhalipathi, Bo Wang, 2020-01-03 From the beginning of software time people have wondered why it isn't possible to accelerate software projects by simply adding staff This is sometimes known as the nine women can't make a baby in one month problem The most famous treatise declaring this to be impossible is Fred Brooks 1975 book The Mythical Man Month in which he declares that adding more programmers to a late software project makes it later and indeed this has proven largely true over the decades Aided by a domain driven code generator that quickly creates database and API code Parallel Agile PA achieves significant schedule compression using parallelism as many developers as necessary can independently and concurrently develop the scenarios from initial prototype through production code Projects can scale by elastic staffing rather than by stretching schedules for larger development efforts Schedule compression with a large team of developers working in parallel is analogous to hardware acceleration of compute problems using parallel CPUs PA has some similarities with and differences from other Agile approaches Like most Agile methods PA gets to code early and uses feedback from executable software to drive requirements and design PA uses technical prototyping as a risk mitigation strategy to help sanity check requirements for feasibility and to evaluate different technical architectures and technologies Unlike many Agile methods PA does not support design by refactoring and it doesn't drive designs from unit tests Instead PA uses a minimalist UML based design approach Agile ICONIX that starts out with a domain model to facilitate communication across the development team and partitions the system along use case boundaries which enables parallel development Parallel Agile is fully compatible with the Incremental Commitment Spiral Model ICSM which involves concurrent effort of a systems engineering team a development team and a test team working alongside the developers The authors have been researching and refining the PA process for several years on multiple test projects that have involved over 200 developers

The book's example project details the design of one of these test projects: a crowdsourced traffic safety system. Design Driven Testing Matt Stephens, Doug Rosenberg, 2011-01-11. The groundbreaking book Design Driven Testing brings sanity back to the software development process by flipping around the concept of Test Driven Development (TDD), restoring the concept of using testing to verify a design instead of pretending that unit tests are a replacement for design. Anyone who feels that TDD is Too Damn Difficult will appreciate this book. Design Driven Testing shows that by combining a forward thinking development process with cutting edge automation testing can be a finely targeted business driven rewarding effort. In other words you'll learn how to test smarter not harder. Applies a feedback driven approach to each stage of the project lifecycle. Illustrates a lightweight and effective approach using a core subset of UML. Follows a real life example project using Java and Flex/ActionScript. Presents bonus chapters for advanced DDTers covering unit test antipatterns and their opposite test conscious design patterns and showing how to create your own test transformation templates in Enterprise Architect.

Communicating Process Architectures 2017 & 2018 J. Bækgaard Pedersen, K. Chalmers, J.F. Broenink, 2019-03-26

Concurrent and parallel systems are intrinsic to the technology which underpins almost every aspect of our lives today. This book presents the combined post proceedings for two important conferences on concurrent and parallel systems: Communicating Process Architectures 2017 held in Sliema, Malta in August 2017 and Communicating Process Architectures 2018 held in Dresden, Germany in August 2018. CPA 2017: Fifteen papers were accepted for presentation and publication; they cover topics including mathematical theory, programming languages, design and support tools, verification and multicore infrastructure and applications ranging from supercomputing to embedded. A workshop on domain specific concurrency skeletons and the abstracts of eight fringe presentations reporting on new ideas, work in progress or interesting thoughts associated with concurrency are also included in these proceedings. CPA 2018: Eighteen papers were accepted for presentation and publication; they cover topics including mathematical theory, design and programming language and support tools, verification, multicore run time infrastructure and applications at all levels from supercomputing to embedded. A workshop on translating CSP based languages to common programming languages and the abstracts of four fringe presentations on work in progress, new ideas as well as demonstrations and concerns that certain common practices in concurrency are harmful are also included in these proceedings. The book will be of interest to all those whose work involves concurrent and parallel systems. *Software Engineering Research, Management and Applications* Roger Lee, 2009-01-29. The 6th ACIS International Conference on Software Engineering Research, Management and Applications (SERA 2008) was held in Prague in the Czech Republic on August 20-22. SERA 08 featured excellent theoretical and practical contributions in the areas of formal methods and tools, requirements engineering, software process models, communication systems and networks, software quality and evaluation, software engineering networks and mobile computing, parallel distributed computing, software testing, reuse and metrics, database retrieval, computer security, software architectures and modeling. Our

conference officers selected the best 17 papers from those papers accepted for presentation at the conference in order to publish them in this volume. The papers were chosen based on review scores submitted by members or the program committee and underwent further rounds of rigorous review.

Data Protection on the Move Serge Gutwirth, Ronald Leenes, Paul De Hert, 2016-01-09. This volume brings together papers that offer methodologies, conceptual analyses, highlight issues, propose solutions, and discuss practices regarding privacy and data protection. It is one of the results of the eighth annual International Conference on Computers, Privacy, and Data Protection (CPDP 2015) held in Brussels in January 2015. The book explores core concepts, rights, and values in upcoming data protection regulation and their adequacy in view of developments such as Big and Open Data, including the right to be forgotten, metadata, and anonymity. It discusses privacy-promoting methods and tools such as formal systems modeling methodology, privacy by design in various forms, robotics, anonymous payment, the opportunities and burdens of privacy self-management, the differentiating role privacy can play in innovation. The book also discusses EU policies with respect to Big and Open Data and provides advice to policy makers regarding these topics. Also, attention is being paid to regulation and its effects, for instance in case of the so-called EU cookie law and groundbreaking cases such as *Europe v Facebook*. This interdisciplinary book was written during what may turn out to be the final stages of the process of the fundamental revision of the current EU data protection law by the Data Protection Package proposed by the European Commission. It discusses open issues and daring and prospective approaches. It will serve as an insightful resource for readers with an interest in privacy and data protection.

Engineering Technology and Applications Fun Shao, Wise Shu, Tracy Tian, 2014-08-19. *Engineering Technology and Applications* contains the contributions presented at the 2014 International Conference on Engineering Technology and Applications (ICETA 2014) Tsingtao, China, 29-30 April 2014. The book is divided into three main topics: Civil and environmental engineering, Electrical and computer engineering, Mechanical engineering.
