Wirelessness Adrian Mackenzie, 2010. For Mackenzie, entanglements with things, gadgets, infrastructures and services, tendencies, fleeting nuances and peripheral shades of often barely registered feeling that cannot be easily codified, symbolized or quantified, mark the experience of wirelessness, and this links directly to James's expanded conception of experience. Wirelessness designates a tendency to make network connections in different times and places using these devices and services. Equally, it embodies a sensibility attuned to the proliferation of devices and services that carry information through radio signals. Above all, it means

heightened awareness of ongoing change and movement associated with networks infrastructures location and information
