Eliminating waste in software projects: Effective knowledge management by using web based collaboration technology Frederik Dahlke, 2008-04-10 Inhaltsangabe Abstract Today in a typical software project people do not document at all or invest a large amount of time to create documentation which at the end proves to be not useful or undiscoverable for others The goal of documentation is to conserve knowledge and make this knowledge accessible for others thereby easing collaboration However this goal is rarely achieved The whole process of producing documentation and searching for valuable information is highly ineffective and means a lot of wasted time Often in a shorthand approach Word Excel and Powerpoint files are used for documentation Among these documents information is not interconnected As a consequence relevant information is hard to find Full text searches take a long time and deliver poor results Imagine searching all documents of a file server of a medium cooperation using the Windows Explorer search functionality The search will probably run several hours and hardly deliver any useful results If any information is found it is hard to tell if the document is up to date who changed the document last and what was changed There is no automated mechanism to inform interested people about updates on any document or information Another approach is using proprietary knowledge management technology and collaboration software like knowledge repositories In the late nineties companies started to implement knowledge management strategies with heavy use of technology The problem herein is that people have to be trained to use the knowledge management technology learn and understand the underlying principles and additionally the handling of specific software If the knowledge management technology is complex it imposes an entry barrier Using knowledge management technology will then be burden for a software development team Since the pressure in a software development is high it is unlikely that a team will be willing to invest much time for learning the technology and hence the pay off will never be realized Furthermore if the basic principles and processes of a chosen technological approach turn out to be inadequate for a specific situation there is often no chance to adapt the knowledge management technology quickly This finally can lead to a situation that the technology is not used at all because at the end it is easier for workers to simply ask someone else they know Aim of this Book This book will show if and how web technology can be used in

Using Web 2.0 for Health Information Paula Younger, Peter Morgan, 2011 Working together is a particular strength of information professionals in all sectors In the area of health information in particular the potential for using the internet for collaborative working is immense Since it was first formally described in 2004 what is currently known as Web 2.0 has affected every library and information sector Web 2.0 has tremendous potential to transform health information

delivery still further Although there have been any individual articles examining Web 2.0 applications and methods of working and there are many individual examples of best practice substantive works that synthesise this experience in one volume are rare This new book is designed to meet this need by drawing together international case studies and reflections on using Web 2.0 The book blends practical insights theory and reflective approaches to offer a cohesive overview of how Web 2.0 is already changing health and medical information work Main strands include enhancing medical nursing and health education information literacy in a health information environment supporting research supporting clinical care developing a service presence using Web 2.0 using social networking to develop an outreach service Readership Although the focus of the book is health information it would be relevant to anyone who would like to gain an insight into this innovative and cost effective method of delivering and sharing information It is equally relevant for those new to Web 2.0 or those with more experience wishing to gain further insight into its application
