When People Come First Critical Studies In Global Health:

When People Come First João Biehl, Adriana Petryna, 2013-07-07 A people centered approach to global health When People Come First critically assesses the expanding field of global health It brings together an international and interdisciplinary group of scholars to address the medical social political and economic dimensions of the global health enterprise through vivid case studies and bold conceptual work The book demonstrates the crucial role of ethnography as an empirical lantern in global health arguing for a more comprehensive people centered approach Topics include the limits of technological quick fixes in disease control the moral economy of global health science the unexpected effects of massive treatment rollouts in resource poor contexts and how right to health activism coalesces with the increased influence of the pharmaceutical industry on health care The contributors explore the altered landscapes left behind after programs scale up break down or move on We learn that disease is really never just one thing technology delivery does not equate with care and biology and technology interact in ways we cannot always predict The most effective solutions may well be found in people themselves who consistently exceed the projections of experts and the medical scientific political and humanitarian frameworks in which they are cast When People Come First sets a new research agenda in global health and social theory and challenges us to rethink the relationships between care rights health and economic futures

Global Health and Geographical Imaginaries Clare Herrick, David Reubi, 2017-03-16 To date geography has not yet carved out a disciplinary niche within the diffuse domain that constitutes global health. However, the compulsion to do and understand global health emerges largely from contexts that geography has long engaged with: urbanisation, globalisation, political economy, risk, vulnerability, lifestyles, geopolitics, culture, governance, development, and the environment. Moreover, global health brings with it an innate powerful and politicising spatial logic that is only now starting to emerge as an object of enquiry. This book aims to draw attention to and showcase the wealth of existing and emergent geographical contributions to what has recently been termed critical global health studies. Geographical perspectives, this collection argues, are essential to bringing new and critical perspectives to bear on the inherent complexities and interconnectedness of global health problems and purported solutions. Thus, rather than rehearsing the frequent critique that global health is more a set of problems than a coherent disciplinary approach to ameliorating the health of all and redressing global bio inequalities, this collection seeks to explore what these problems might represent and the geographical imaginaries inherent in their constitution. This unique volume of geographical writings on global health not only deepens social scientific engagements with health itself but in so doing brings forth a series of new conceptual, methodological, and empirical contributions to social scientific multidisciplinary scholarship.

Handbook of Critical Policy Studies Frank Fischer, Douglas Torgerson, Anna Durnová, Michael Orsini, 2015-12-18 Critical policy studies as illustrated in this Handbook challenges the conventional approaches to public policy inquiry. But it offers important innovations as well, in particular its focus on discursive politics, policy argumentation, and deliberation and interpretive modes of analysis.

The Palgrave Handbook of Biology and Society Maurizio Meloni, John Cromby, Des Fitzgerald, Stephanie Lloyd, 2017-10-27 This comprehensive handbook synthesizes the often fractured relationship between the study of biology and the study of society. Bringing together a compelling array of interdisciplinary contributions, the authors demonstrate how nuanced attention to both the biological and social sciences opens up novel perspectives upon some of the most significant sociological, anthropological, philosophical, and biological questions of our era. The six sections cover topics ranging from genomics and epigenetics to neuroscience and psychology to social epidemiology and medicine. The authors collaboratively present state-of-the-art research and perspectives in some of the most intriguing areas of what can be called biosocial and biocultural approaches, demonstrating how quickly we are moving beyond the acrimonious debates that characterized the border between biology and society for most of the twentieth century. This landmark volume will be an extremely valuable resource for scholars and practitioners in all areas of the social and biological sciences.
