Treatise on Basic Philosophy: Ontology II: A world of systems Mario Bunge, 1974 Treatise on Basic Philosophy M. Bunge, 2012-12-06 Reframing the Social Professor Poe Yu-ze Wan, 2013-01-28 Drawing extensively on the research findings of natural and social sciences both in America and Europe Reframing the Social argues for a critical realist and systemist social ontology designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research and the nature of the social It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists to challenge the commonly held view that the systems based approach is holistic in nature and necessarily downplays the role of human agency Theoretically sophisticated and investigating the work of a theorist whose work has until now received insufficient attention in Anglo American thought this book will be of interest to those working in the field of social theory as well as scholars concerned with philosophy of social science the project of analytical sociology and the nature of the relationship between the natural and social sciences **Agent-Oriented Information Systems II** Paolo Bresciani, Paolo Giorgini, Brian Henderson-Sellers, Graham Low, Michael Winikoff, 2005-05-10 Information systems have become the backbone of all kinds of organizations day In almost every sector manufacturing education health care government and businesses large and small information systems are relied upon for everyday work communication information gathering and decision making Yet the inabilities in current technologies and methods have also resulted in poor performance incompatibilities and obstacles to change As many organizations are reinventing themselves to meet the challenges of global competition and e commerce there is increasing pressure to develop and deploy new technologies that are reliable robust and responsive to rapid and unexpected change Agent concepts hold great promise for responding to the new realities of formation systems They offer higher level abstractions and mechanisms which address issues such as knowledge representation and reasoning communication coordination cooperation among heterogeneous and autonomous parties perception commitments goals beliefs intentions etc all of which need conceptual modelling On the one hand the concrete implementation of these concepts can lead to advanced functionalities e g in inference based query answering transaction control adaptive workflows brokering and integration of disparate information sources and automated communication processes On the other hand their rich representational capabilities allow for more faithful and reliable treatments of complex organizational processes leading to more effective requirements analysis and architectural detailed design *Explanation in the Special Sciences* Marie I. Kaiser, Oliver R. Scholz, Daniel Plenge, Andreas Hüttemann, 2013-11-29 Biology and history are often viewed as closely related disciplines with biology informed by history especially in its task of charting our evolutionary past Maximizing the opportunities for cross fertilization in these two fields requires an accurate reckoning of their commonalities and differences precisely what this volume sets out to achieve Specially commissioned essays by a team of recognized international

researchers cover the full panoply of topics in these fields and include notable contributions on the correlativity of evolutionary and historical explanations applying to history the latest causal mechanical approach in the philosophy of biology and the question of generalized laws that might pertain across the two subjects The collection opens with a vital interrogation of general issues on explanation that apart from potentially fruitful areas of interaction could the etiology of the causal mechanical perspective in biology account for the historical trajectory of the Roman Empire this volume also seeks to chart relative certainties distinguishing explanations in biology and history It also assesses techniques such as the use of probabilities in biological reconstruction deployed to overcome the inevitable gaps in physical evidence on early evolution Methodologies such as causal graphs and semantic explanation receive in depth analysis Contributions from a host of prominent and widely read philosophers ensure that this new volume has the stature of a major addition to the literature

A World of Systems Mario Bunge,1979 **Treatise on Basic Philosophy** Mario BUNGE,1974-11-30 In this Introduction we shall sketch a profile of our field of inquiry This is necessary because semantics is too often mistaken for lexicography and therefore dismissed as trivial while at other times it is disparaged for being concerned with reputedly shady characters such as meaning and allegedly defunct ones like truth Moreover our special concern the semantics of science is a newcomer at least as a systematic body and therefore in need of an introduction I GOAL Semantics is the field of inquiry centrally concerned with meaning and truth It can be empirical or nonempirical When brought to bear on concrete objects such as a community of speakers semantics seeks to answer problems concerning certain linguistic facts such as disclosing the interpretation code inherent in the language or explaining the speakers ability or inability to utter and understand new sentences of the language This kind of semantics will then be both theoretical and experimental it will be a branch of what used to be called behavioral science Poznan Studies in the Philosophy of the Sciences and Humanities ,1990
