Treatment Of Complicated Mourning:

Treatment of Complicated Mourning Therese A. Rando, Christine M. Nezu, 1993 Focuses specifically on complicated mourning often referred to as pathological unresolved or abnormal grief It provides caregivers with practical therapeutic strategies and specific interventions that are necessary when traditional grief counseling is insufficient The goal is to turn complicated into uncomplicated mourning Treating Traumatic Bereavement Laurie Anne Pearlman, Camille B. Wortman, Catherine A. Feuer, Christine H. Farber, Therese A. Rando, 2014-01-13 This book presents an integrated treatment approach for those struggling to adapt after the sudden traumatic death of a loved one The authors weave together evidence based clinical strategies grounded in cutting edge knowledge about both trauma and grief The book offers a clear framework and many practical tools for building survivors psychological and interpersonal resources processing their trauma and facilitating mourning In a large size format with lay flat binding for easy photocopying the book includes over 30 reproducible handouts Purchasers can access a companion website to download and print these materials as well as supplemental handouts and a sample 25 session treatment plan Winner Second Place American Journal of Nursing Book of the Year Award Psychiatric and Mental Health Nursing Category The Treatment of Complicated Mourning in Children María Domínguez, 1999 *Bereavement Counseling* Junietta Baker McCall, 2004 A practical guide to the assessment and treatment of complicated grief responses using a pastoral approach that combines clinical and spiritual care **The Deceased-focused Approach to Grief** Frank E. Eyetsemitan, 2022-04-22 Conventional grief models focus on the bereaved including actions that they need to take to get back to normalcy following the death of a loved one This book suggests that it might be helpful in the grieving process to focus on the deceased instead Research points to the benefits of altruistic acts and thoughts including improvements in mood Altruistic acts and thoughts also could be extended to the deceased who in death has experienced a loss as well By taking on the perspective of and being empathic toward the deceased a response shift occurs that could result in mood improvement and happiness in the bereaved The book provides guidelines for this alternative grief model in the death of a child of a teenager of a spouse partner and of a sibling and in multiple deaths and in persistent grief experience among others Based on motivational principles a workbook is also provided for monitoring progress in coping with bereavement Comprehension questions and additional readings are provided in each chapter to help the reader further explore the topic at hand This book would be useful in a course on death dying and bereavement to healthcare practitioners bereavement counsellors and to scholars in death dying and bereavement across different fields including psychology sociology social work public health and religion Most grief models focus on the bereaved including actions the survivor needs to take to get back to normalcy after a loss However in the grieving process it might be helpful if attention is shifted to the deceased instead The bereaved by doing things she or he perceives as pleasing to the deceased might receive healing and satisfaction in return Lisa Farino 2010 notes that there is no shortage of research pointing to the

beneficial effects of focusing on others In a study by Carolyn Schwartz and Rabbi Meir Sendor 1999 lay people with a chronic disease were trained to provide compassionate unconditional regard to others who had the same illness The results showed that the providers of care and compassion reported better quality of life than the recipients of care and compassion even though both givers and receivers had the same disease The givers showed profound improvements in confidence self awareness self esteem depression and in role functioning The researchers emphasized the beneficial importance of response shift the shifting of internal standards values and concept definition of health and well being in dealing with one's own adversity Farino 2010 notes that this research is profound because in western culture the belief is that feeling happy tends to be getting something for yourself There are biological origins to the notion that it's better to give than to receive Using the functional magnetic resonance imaging fMRI researchers were able to demonstrate a connection between brain activity and giving People who gave voluntarily and also for a good cause experienced more activation of the part of brain that controls for pleasure and happiness e.g. Harbaugh Mayr Burghart 2007 Studies show that about 7% of the US population experience complicated or prolonged grief disorder e.g. Kersting et al 2011 This is persistent grief that does not go away and many parents tend to experience this after the loss of a child In their study Catherine Rogers and colleagues 2008 found bereaved parents reporting more depressive symptoms poorer well being and more health problems after a child's loss almost 20 years later Survivors usually show concern about how their deceased loved ones felt prior to death and if happy or not in the afterlife e.g. Eyetsemitan Eggleston 2002 A study reported respondents used emotion discrete terms such as sad happy or angry to describe the faces of deceased persons The researchers suggested that the perceived emotional state of a deceased loved one could impact on the survivor's mourning trajectory e.g. Eyetsemitan Eggleston 2002 The bereavement model of placing focus on the deceased instead provides an alternative to existing bereavement models in helping the survivor to cope with a loss
