Natural Wastewater Treatment Systems, Second Edition Ronald W. Crites, E. Joe Middlebrooks, Robert K. Bastian, 2014-03-14 Calling for ecologically and economically sound wastewater treatment systems the authors of Natural Wastewater Treatment Systems explore the use of wetlands sprinkler or deep irrigation groundwater recharge and other natural systems as sustainable methods for the treatment and management of wastewater Based on work by prominent experts in natural waste treatment this text provides a thorough explanation on how soil and plants can successfully sustain microbial populations in the treatment of wastewater Determining that natural systems cost less to construct and operate and require less energy than mechanical treatment alternatives this book also explains how these processes produce lower amounts of residual solids and use little or no chemicals What s New in the Second Edition This revised edition includes current design and regulatory and operational developments in the natural wastewater treatment field It provides detailed

examples and analyses along with significant operational data in each chapter. It also considers how processes provide passive treatment with a minimum of mechanical elements and describes new approaches to partially mixed ponds including dual powered aeration ponds. Introduces the planning procedures and treatment mechanisms responsible for treatment in ponds, wetlands, land application and soil absorption systems. Provides new case studies of constructed wetlands and water reuse systems. Presents design criteria and methods of pond treatment and pond effluent upgrading. Describes constructed wetlands design procedures, process applications, treatment performance data and land treatment concepts and design equations. Includes information on constituents of emerging concern CEC and their fate in natural systems. The text discusses wastewater pond systems, free water surface constructed wetlands, subsurface and vertical flow constructed wetlands, land treatment, sludge management and onsite wastewater systems. It describes residuals and biosolids management including nitrogen removal, pretreatment methods and uses U.S. customary and metric units in all chapters. It presents case studies of new applications of natural systems and includes worked examples of design equations for ponds and land treatment. It also provides a biosolids regulatory update from a top EPA scientist and algae reduction technologies for ponds and wetlands. Designed for practicing wastewater engineers and scientists involved in the planning, design and operation of ponds, wetlands, land treatment, biosolids and onsite soil based treatment systems, the book integrates many natural treatment systems into one single source.

Wetland Systems for Water Pollution Control 2000 K. R. Reddy, Robert H. Kadlec, 2001-12

Selected proceedings of the 7th International Conference on Wetland Systems for Water Pollution Control held in Lake Buena Vista, Florida, USA, 11-16 November 2000. Wetlands are now considered as a widely applicable low cost alternative for treating municipal, industrial and agricultural effluents. Increasing numbers of wetland projects have come into operation over the last decade, notably those in Florida. IWA's 7th Wetlands conference provided a forum for the synthesis and interpretation of the current status of treatment wetlands. The conference reflected the interdisciplinary nature of the topic with a diversity of delegates from scientific and engineering disciplines contributing. It addressed research information on current understanding of treatment wetlands and the need to transfer basic research information to managers involved in solving applied problems and identified future directions for design and management of treatment wetlands. From a very large programme of over 200 oral and poster presentations, 86 papers have been selected for these proceedings. As well as authoritative keynote presentations, there are papers on phosphorus removal and transformations, nitrogen removal and transformations, pathogen removal, optimisation and modelling, ecological considerations, subsurface flow wetlands, surface flow wetlands, industrial wastewaters, agricultural wastewaters and stormwater. They constitute an outstanding summary of our current knowledge of wetland systems in management of the water environment.
