Shashi Menon, 2014-12-27 Transmission Pipeline Calculations and Simulations Manual is a valuable time and money saving tool to quickly pinpoint the essential formulae equations and calculations needed for transmission pipeline routing and construction decisions The manual's three part treatment starts with gas and petroleum data tables followed by self contained chapters concerning applications Case studies at the end of each chapter provide practical experience for problem solving Topics in this book include pressure and temperature profile of natural gas pipelines how to size pipelines for specified flow rate and pressure limitations and calculating the locations and HP of compressor stations and pumping stations on long distance pipelines Case studies are based on the author's personal field experiences Component to system level coverage Save time and money designing pipe routes well Design and verify piping systems before going to the field Increase design accuracy and systems effectiveness

Corrosion and Reliability Assessment of Inspected Pipelines Rafael Amaya-Gómez, Emilio Bastidas-Arteaga, Mauricio Sánchez-Silva, Franck Schoefs, Felipe Muñoz, 2023-11-20 This book provides the most up to date advanced methods and tools for risk assessment of onshore pipelines These methods and tools are based primarily on information collected from ILI measurements and additional information about the soil surrounding the pipeline The book provides a better understanding how the defects grow and interact repulsion or attraction and their spatial variability In addition the authors contemplate new defects that evolve between inspections and how they could affect the pipeline's reliability A real world case is presented to reinforce the concepts presented in the book The book is structured into three parts i an introduction to onshore pipelines and the problem of corrosion ii a framework that deals with uncertainty for integrity programs for corroded pipelines and iii the applications of the methods presented in the book The book is ideal for researchers and field engineers in oil and gas transportation and graduate and undergraduate engineering students interested in pipeline reliability assessments spatial variability and risk based inspections

Numerical Calculations for Process Engineering Using Excel VBA Chi M. Phan, 2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler's method to optimise a reactor and combining bisection code and Euler's method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch

reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

Topics on Oil and Gas Ali Ismet Kanlı, Tye Ching Thian, 2023-12-20 Reservoir characterization is the model that characterizes reservoirs based on their ability to store and produce hydrocarbons Reservoir modeling is the process of creating a three dimensional representation of a given reservoir based on its petrophysical geological and geophysical properties Reservoir engineering is the formulation of development and production plans that will result in maximum recovery for a given set of economic environmental and technical constraints It is not a one time activity but needs continual updating throughout the production life of a reservoir Reservoir management is often defined as the allocation of resources to optimize hydrocarbon recovery from a reservoir while minimizing capital investments and operating expenses The oil and gas industry is divided into upstream and downstream sectors In general the upstream sector involves activities carried out at a reservoir while the downstream sector involves all petroleum processing activities carried out in a refinery Petroleum processing engineering involves all downstream crude oil processing operations from crude oil as the feedstock to final products such as gasoline kerosene diesel gas oil and lubricating oil Petroleum processing technology continues to develop in consideration of all types of sustainability related challenges This book provides a comprehensive overview of the oil and gas industry presenting the most recent research in the field
