How to build a value stream mapping (VSM) Mickaël Réquillard, 2020-07-27 Lean management appeared in the 1950s and is now deployed not only in production activities but also in a multitude of functions. Its main objective is to eliminate all process waste in order to improve process performance and meet the right customer needs by allocating company resources wisely. A multitude of continuous improvement tools are available to achieve this goal, including VSM (Value Stream Mapping). This tool, which may seem complex the first time around, is an excellent way to analyse a process, identify how it works, detailing both physical and information flows, and highlight losses. Once you have acquired the various notions specific to this method, which we will detail in this book, it becomes an excellent means of communication, visual at any level in the company. It allows to define the improvements and the strategy for the months or even years to come. It allows decision makers to take a real overview of the situation. This book will allow you to: Understand the terms used in a VSM; Understand when to use it and the benefits of this method; Know how to read a VSM by understanding its logic, symbols and formalisms; Know how to represent a current VSM and design a future VSM; Understand how to calculate key indicators; Put into practice through several examples; Enjoy reading.

Creating Mixed Model Value Streams Kevin J. Duggan, 2018-02-05 Following in the footsteps of its bestselling predecessor, Kevin J. Duggan, an executive mentor and recognized authority on Lean and Operational Excellence, draws on more than 10 years of experience and learning to provide *Creating Mixed Model Value Streams*, Second Edition. This second edition takes a step-by-step approach to implementing Lean in complex environments and describes which Lean techniques to use when faced with difficult situations, including high product mix, scheduling problems, shared resources, and unstable customer demand. In addition to a new section on handling shared resources to support mixed model production, the second edition contains updates to sections on mixed model value streams. It introduces new information on constructing product family matrices, expands on the concept of takt in mixed models, provides additional insights on existing mixed model concepts such as determining product family takt capability and heijunka (load level scheduling). Presents new concepts on sequencing work, such as offset scheduling and sequenced first-in-first-out (FIFO) lanes. Illustrated with a case study based on actual experience, as well as downloadable resources with helpful tools, the book walks readers through the reasoning the author has used with great success in practice. It delves beyond the basics of value stream mapping to explain how to create future states in a manufacturing environment characterized by multiple products, varying cycle times, and changing demand. Demonstrating advanced techniques for creating flow through shared resources, it also considers the concept of a guaranteed turnaround time for the shared resource. The downloadable resources include a spreadsheet and tutorial for sorting products into families, spreadsheets for calculating equipment required and for determining the interval for Every Part Every Interval (EPEI), samples of visual method sheets for standard work, case study value stream maps, and mapping icons.
