Vascular And Peritoneal Access For Dialysis Topics In Renal Medicine:

Vascular and Peritoneal Access for Dialysis V.E. Andreucci, 2012-12-06 When the external Quinton Scribner arteriovenous shunt was developed in 1960 and a little later the internal Brescia Cimino arteriovenous fistula was developed as a vascular access for hemodialysis thereby making possible regular dialysis therapy of chronic uremic patients many nephrologists became surgeons having learned the type of vascular surgery related to hemodialysis quite well The same series of events occurred with regards to peritoneal dialysis with the introduction of the Tenckhoff catheter and the need for gaining a permanent access to the peritoneum for chronic ambulatory peritoneal dialysis CAPD therapy With time however problems relating to vascular and peritoneal access have forced many nephrologists to give up their surgery meanwhile many surgeons have become quite expert in some sophisticated techniques relating to dialysis e.g. vessel grafting prosthesis implantation etc Today whether or not involved in this type of surgery both nephrologists and surgeons remain interested in knowing all available access devices for dialysis as well as the surgical techniques involved However all nephrologists involved in dialysis must know how to prevent or treat complications related to dialysis access Thus it appeared to me to be quite advisable to have a book in my series Topics in Renal Medicine dealing with vascular and peritoneal access for dialysis Critical Care Nephrology C. Ronco, R. Bellomo, 2012-12-06 Internists surgeons critical care physicians and nephrologists all treat critically ill patients with renal failure and the multiple system organ dysfunction syndrome A comprehensive review of the state of the art of this topic is definitely needed both in academic and clinical medicine and Critical Care Nephrology fulfils this need It is a useful reference tool for both nephrologists and intensive care specialists and it is therefore no coincidence that the editors of the book are themselves specialists in these particular fields The book addresses the following definitions of critical illness epidemiology monitoring and diagnostic procedures pathophysiology of organ systems in relation to kidney function concepts of renal physiologic and pathologic responses to various derangements oxygen transport and cardiovascular adaptations hemodynamic parameters respiratory parameters mechanical ventilation and cardiac support and severity score parameters The book is also devoted to all forms of acute renal failure with specific reference to intensive care patients The nature of the multiple organ dysfunction syndrome is discussed with special emphasis on the impact of different organs dysfunction and kidney failure Kidney function and acute renal failure in patients with kidney liver and heart transplants is also considered as well as acute illness occurring in chronic hemodialysis patients Special emphasis is placed on therapeutic interventions and treatment procedures Different forms of organ support are discussed including liver lung and cardiac therapy

International Yearbook of Nephrology 1991 V.E. Andreucci, Leon G. Fine, 2012-12-06 The 1991 International Yearbook of Nephrology is the third in a successful series which has as its principal aim the presentation of a comprehensive list of topics of the greatest current relevance to clinical nephrologists We believe that by following the subjects covered by the Yearbook in the broad field of nephrology the practicing nephrologist and nephrologist in training can stay abreast of a number of

rapidly advancing fields To improve the quality of the Yearbook we have appointed an Editorial Board to provide suggestions for topics and authors Thus we have invited 58 outstanding nephrologists from around the world the list of them is included in this issue of the Yearbook to identify annually potential topics for the Yearbook The reply was excellent and the contribution quite outstanding Thus for the 1992 Yearbook we received more than 150 suggestions A number of them will be included in the next issue if they continue to be viewed as current and important We also invite readers to suggest topics for upcoming issues of the Yearbook The present issue the 1991 Yearbook represents an improvement over previous volumes We expect this trend to be maintained in future years As in previous issues all chapters provide a complete accurate and up to date list of important references We are grateful to all the authors for their excellent contributions and for having fulfilled the deadline in forwarding their manuscript Our special thanks to Kluwer Academic Publishers for the timely publication of this volume Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1990 **Inheritance of Kidney and Urinary Tract Diseases** Adrian Spitzer, Ellis D. Avner, 2012-12-06 Genetic disorders have emerged as a prominent cause of morbidity and mortality among infants and adults As many as 10% to 20% of hospital admissions and at least 10% of the mortality in this age group are due to inherited diseases There are at least two factors that have brought genetic disorders into the forefront of pediatrics One is a great reduction in childhood mortality due to infections and nutritional deficiency states and the other is the rapid progress made in the identification of genetic defects Amniocentesis chorionic villus sampling and recombinant DNA technology have already had a tremendous impact on the practice of medicine This is why the first two chapters of this volume are dedicated to general principles of molecular genetics and to a description of the techniques used to diagnose genetic disorders at the DNA level The relevance of this new area of science to the study of inherited renal diseases is reflected in the large body of knowledge that has been generated regarding the association between various glomerular nephritides and genetic markers such as the HLA system and even more impressively in the direct or indirect identification of abnormal genes or gene products in Alport's syndrome autosomal dominant polycystic kidney disease and Lowe's syndrome These discoveries figure prominently in the pages of this book Yet the progress we have made has barely scratched the surface of the problem **Interventional Nephrology** Alexander S.
