Governability of Fisheries and Aquaculture: Theory and Applications Maarten Bavinck, Ratana Chuenpagdee, Svein Jentoft, Jan Kooiman, 2013-04-10 Following from Fish for Life Interactive Governance for Fisheries Kooiman et al 2005 which presents an interdisciplinary and intersectoral approach to the governance of capture and aquaculture fisheries this volume pursues what interactive governance theory and the governability perspective contribute to the resolution of key fisheries problems these include overfishing unemployment and poverty food insecurity and social injustice Since these problems are varied and can be felt among governments resource users and communities globally the diagnosis must be holistic and take account of principles institutions and operational conditions The authors argue that wicked problems and institutional limitations are inherent to each setting and must be included in the analysis The volume thereby offers a new lens and a systematic approach for analysing the nature of problems and challenges concerning the governance of fisheries explores where these problems are situated and how potential solutions may be found It now seems clear that the crisis in the world's fisheries is a much larger and more complex problem than many had imagined Yet examining it through the lens of governability may offer the best hope for alleviating it as well as alleviating similar crises in other social systems James R McGoodwin Professor Emeritus
