Application of Neuropsychological Test Batteries Charles J. Golden, Gerald Goldstein, Theresa M. Incagnoli, 2013-11-11

Clinical neuropsychology has become a field of major prominence during the past several years as well as a field of great complexity As a result of the extensive amount of activity that neuropsychology has experienced recently two major developments have emerged First several approaches have evolved regarding comprehensive neuropsychological assessment There are presently several standard test batteries in common use as well as an approach to assessment that does not make use of standard batteries but rather fits the evaluation accomplished to the particular diagnostic problems presented by the individual patient Second a great deal of specialization has emerged with assessment procedures developed for evaluation of specific types of neuropsychological deficit The purpose of this volume is to review these developments particularly with reference to their implications for application in clinical settings The history of this book's development is of particular interest Some years ago the Veterans Administration became concerned with developing an optimal method of neuropsychological assessment for its many health care related facilities Initially the problem was conceptualized in terms of whether the VA should encourage wider use of the long established Halstead Reitan

Neuropsychological Test Battery HRB or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery LNNB A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of papers to invited psychologists from various VA facilities **Functional**
