What Is This Thing Called Happiness? Fred Feldman, 2010-03-18 According to an ancient and still popular view sometimes known as eudaimonism a person's well being or quality of life is ultimately determined by his or her level of happiness According to this view the happier a person is the better off he is The doctrine is controversial in part because the nature of happiness is controversial In *What Is This Thing Called Happiness* Fred Feldman presents a study of the nature and value of happiness Part One contains critical discussions of the main philosophical and psychological theories of happiness Feldman presents arguments designed to show that each of these theories is problematic Part Two

contains his presentation and defense of his own theory of happiness which is a form of attitudinal hedonism On this view a person's level of happiness may be identified with the extent to which he or she takes pleasure in things Feldman shows that if we understand happiness as he proposes it becomes reasonable to suppose that a person's well being is determined by his or her level of happiness This view has important implications not only for moral philosophy but also for the emerging field of hedonic psychology Part Three contains discussions of some interactions between the proposed theory of happiness and empirical research into happiness

Know Thyself Thomas O. Buford, 2011-01-01 *Know Thyself* An Essay in Social Personalism proposes that social Personalism can best provide for self knowledge In the West self knowledge has been sought within the framework of two dominant intellectual traditions order and the emerging self On the one hand ancient and medieval philosophers living in an orderly hierarchical society governed by honor and shame and bolstered by the metaphysics of being and rationalism believed persons gain self knowledge through uniting with the ground of their being once united they would understand what they are what they are to be and what they are to do On the other hand Renaissance and modern thinkers such as Pico della Mirandola Copernicus Descartes Locke and Kant shattered the great achievement of the high middle ages and bequeathed to posterity an emerging self in a splintered world Continuing their search for self knowledge the moderns found themselves faced with the dualism of the emerging self of the Renaissance and the natural world as understood by modern scientists New problems spun out of this dualism including the mind body problem the other minds problem free will and determinism the nature and possibility of social relationships values moral norms and their relationship to the natural and social worlds and the relationships between science and religion Finding self knowledge among these splinters without a guiding orientation has proven difficult Even though luminaries such as Spinoza Berkeley and Hegel attempted to bring order to the sundered elements their attempts proved unsatisfactory We contend that neither order nor the emerging self can adequately provide for self knowledge Since those culturally embodied master narratives lead us to an impasse we turn to social Personalism Self knowledge developed in this book shows how persons in relation to the Personal learn who they are what they are to become and what they must do to achieve that goal It also shows that the achievement of self knowledge is supported by a natural social and cultural environment rooted in trust In this humane and timely discussion Thomas O Buford offers a personalist understanding of self knowledge that avoids the impersonalisms that erode the dignity of persons and their moral life which characterize modern life
