Computational Methods in Multiphase Flow VIII P. Vorobieff, C.A. Brebbia, J.L. Munoz-Cobo, 2015-04-20 This book presents the latest research in one of the most challenging yet most universally applicable areas of technology Multiphase flows are found in all areas of technology at all length scales and flow regimes involving compressible or incompressible linear or nonlinear fluids The range of related problems of interest is vast including astrophysics biology geophysics atmospheric process and many areas of engineering The solution of the equations that describe such complex problems often requires a combination of advanced computational and experimental methods For example any models developed must be validated through the application of expensive and difficult experimental techniques Numerous problems in the area thus remain as yet unsolved including modelling nonlinear fluids modelling and tracking interfaces dealing with multiple length scales characterising phase structures and treating drop break up and coalescence The papers contained in the book were presented at the eighth in a well established series of biennial conferences that began in 2001 They represent close interaction between numerical modellers and other researchers working to gradually resolve the many outstanding issues in understanding of multiphase flow The papers in the book cover such topics as Multiphase Flow Simulation Bubble and Drop Dynamics Interface Behaviour Experimental Measurements Energy Applications Compressible Flows Flow in Porous Media Turbulent Flow Image Processing Heat Transfer Atomization Hydromagnetics Plasma Fluidised Beds Cavitation

Transfer Learning for Harmful Content Detection Salar Mohtaj, 2025-09-26 This book provides an in depth exploration of the effectiveness of transfer learning approaches in detecting deceptive content i e fake news and inappropriate content i e hate speech The author first addresses the issue of insufficient labeled data by reusing knowledge gained from other natural language processing NLP tasks such as language modeling He goes on to observe the connection between harmful content and emotional signals in text after emotional cues were integrated into the classification models to evaluate their impact on model performance Additionally since pre processing plays an essential role in NLP tasks by enriching raw data especially critical for tasks with limited data such as fake news detection the book analyzes various pre processing strategies in a transfer learning context to enhance the detection of fake stories online Optimal settings for transferring knowledge from pre trained models across subtasks including claim extraction and check worthiness assessment are also investigated The author shows that the findings indicate that incorporating these features into check worthy claim models can improve overall model performance though integrating emotional signals did not significantly affect classifier results Finally the experiments highlight the importance of pre processing for enhancing input text particularly in social media contexts where content is often ambiguous and lacks context leading to notable performance improvements
