Pharmaceutical Biomaterials Jianxun Ding,Chao Zhao ,Wenliang Li,Jiaxue Liu,2025-09-17 Biomaterials as a kind of natural or synthetic functional materials are widely applied for pharmaceutical science because of their excellent biocompatibility and biofunctions especially playing an increasing role in controlled drug delivery The development of biomaterials for smart drug delivery promotes advances in medicine Various biomaterials are designed and prepared to deliver different therapeutic drugs including small molecule drugs peptides proteins genes and so forth to the lesion sites in a more precise and controlled manner improve the specificity and bioavailability upregulate the therapeutic effects of the diseases and reduce the side effects to avoid the damage to normal tissues and organs Researchers are accelerating the development of controlled drug delivery where pharmaceutical biomaterials serve as a universal platform to improve therapeutic accuracy and help us achieve an entirely precise drug temporally and spatially However many problems of biomaterials still need to be solved for intelligent drug delivery For example the stability uniformity and safety of biomaterials as drug carriers still need to be further confirmed The biomaterials with unique drug loading properties should be further revealed to improve the precision of targeted and controlled drug release to enhance the drug delivery system s application efficiency and meet clinical needs The design and development of a smart library of biomaterials remain challenging and patient heterogeneity poses an ongoing challenge Because of this there are many more possibilities to look forward to in biomaterial delivery drug systems The multidisciplinary collaborations have produced innovative strategies to treat a range of diseases *Radiology, eTextbook* Ashley Shaw,Edmund Godfrey,Abhinav Singh,Tarik Massoud,2010-09-02 From choosing the relevant investigation through to interpretationand its effects on patient management Radiology Clinical

collateral vascular network at the base of the brain Moyamoya syndrome is caused by numerous conditions which lead to arterial occlusion of the circle of Willis and resultant collaterals reminiscent of moyamoya disease Due to the diverse angioarchitecture and unknown influence factors the hemodynamic disturbances of MMD Moyamoya syndrome are complicated and result in multimodal clinical manifestations including headache cognitive impairment seizures TIA infarction and hemorrhage Surgical revascularization has been proven as effective in decreasing incidence of long term risk of stroke However occurrence of perioperative stroke and complications such as seizures and cerebral hyperperfusion syndrome are still unpredictable In addition many patients with cognitive impairment cannot benefit from surgical revascularization and the mechanism remains unclear Thus a series of studies focusing on the objective evaluation of MMD Moyamoya syndrome are needed to help understand this complicated cerebrovascular disease and improve our treatment strategy The goal of this Research Topic is to better understand the pathophysiological nature of MMD Moyamoya syndrome through objective neuroimaging We also aim to generate a reasonable and objective evaluation system for MMD Moyamoya syndrome and would like to understand the link between cognitive impairment and brain damage of MMD Moyamoya syndrome through neuroimaging Through these findings we also aim to improve the treatment strategy by understanding the pathophysiological link with relevant complications Finally we also aim to improve our understanding of the significance of perioperative management for patients with severe complications from the perspective of objective evaluation
