Green, John A. Piel, 2015-07-14 The authors have grouped the theories into three classical families which differ in their views relative to the prime motives underlying human nature They show how theories are specific examples of more general points of view called paradigms The theories chosen to represent the three paradigms the Endogenous Paradigm Exogenous Paradigm and the Constructivist Paradigm were selected because they met four criteria importance as judged by academic and research psychologists fertility as judged by the amount of research the theory has generated scope as judged by the variety of phenomena the various theories explain family resemblance as judged by how well each theory represents its paradigm The authors present the paradigm case in the lead chapter for each paradigm This paradigm case is the best example for the paradigm The authors explain why paradigm cases are important and give them more detailed treatment than other theories in the same paradigm Recent Theories of Human Development R. Critical Theories of Psychological Development John M. Broughton, 2013-06-29 Something instructive occurred in the process of entitling the present collection Both editor and publisher sought a simple and succinct rubric for the various pieces of work But they rapidly and reluctantly reached the consensus that by either intellectual or marketing criteria the insertion of the adjective psychological to qualify the noun development was a communicative necessity Much to the chagrin of the developmental psychologist the term development still connotes to the world at large as well as the general community of publishers librarians and computer archivists the modernization of nation states Inside and outside the university I find that when asked What are you interested in I am not at liberty to reply The concept of development without being absorbed immediately into a discussion of Third World studies The approach of the present volume should be taken as an exhortation to psychologists to take the

genealogy of development seriously The history of the discipline is not so different from the history of the word and as we shall discover the concern with developmental progress cannot easily be separated from the urge for dominion This volume presents a selection from the recent critical scholarship on psychological development The emphasis is on rethinking the field of developmental psychology at the level of theory **Theories of Adolescent Development** Barbara M.

designed with a broad range of readers in mind and in particular those with little previous exposure to developmental psychology Theories of Human Growth and Development: Developmental Psychology Theresa Lowry-Lehnen, 2015-05-12

Developmental psychology is the branch of psychology and the scientific study of how people grow and change over the course of a lifetime. Originally concerned with infants and children, it expanded to include adolescence, adult development, ageing, and the entire lifespan. Beginning with Sigmund Freud (1856-1939) and Jean Piaget (1896-1980), the early focus of developmental psychology was on the maturation of children. Within the last three decades, researchers who study human development have expanded their focus to examine change across a broad range of topics, including psycho-physiological processes, cognitive development, and areas such as problem solving, moral and conceptual understanding, language acquisition, social personality, emotional development, self-concept, and identity formation. The scientific study of human growth and development is important not only to psychology but also to biology, sociology, anthropology, education, history, and health care. Most important, however, are its practical applications. By better understanding how and why people change and grow, the knowledge can be applied to help people to reach their full potential.
